

Hi, friends!

Let's go back in time!

Long, long ago, there were
dinosaurs.

Look!

This dinosaur has horns!

It is a Carnotaurus!

**Its name means meat-eating
bull.**

It lived in Argentina, in South America.

That was about 70 million
years ago.

Look at its head!

It had two horns above its
eyes.

Just like a big bull!

Maybe it used them to push
other Carnotaurus.

Its head was short and tall.

Carnotaurus was big.

It was about as long as a small bus!

It was as heavy as one or two cars!

Now look at its long legs!

Scientists think it was a fast runner.

Its strong tail may have helped
it run.

Zoom, zoom!

Now look at its arms.

Its arms were super tiny!

For its size, its arms were tinier
than T. rex's!

Its little fingers probably could not move!

This rock shows **Carnotaurus**
skin!

Its skin had lots of small,
bumpy scales.

**Very few meat-eating dinosaurs
left skin prints like this!**

**Scientists found its bones in
Argentina in 1984.**

**Its real bones are in a museum
in Buenos Aires.**

Copies of it stand in museums
all over the world!

Let's say the words!

Carnotaurus!

Dinosaur!

Head!

Horns!

Big!

Legs!

Fast!

Tail!

Arms!

Tiny!

Skin!

Bones!

Great job!

Bye-bye, Carnotaurus!

Wait!

Does it say moo?

No!

It is a dinosaur, not a bull!

See you next time!
