

Hi, friends!

Let's go far, far north.

Look!

There is ice everywhere.

The sea here is very cold.

Brrr, so cold!

Let's dive in.

We are going deep, deep
down.

It is getting dark.

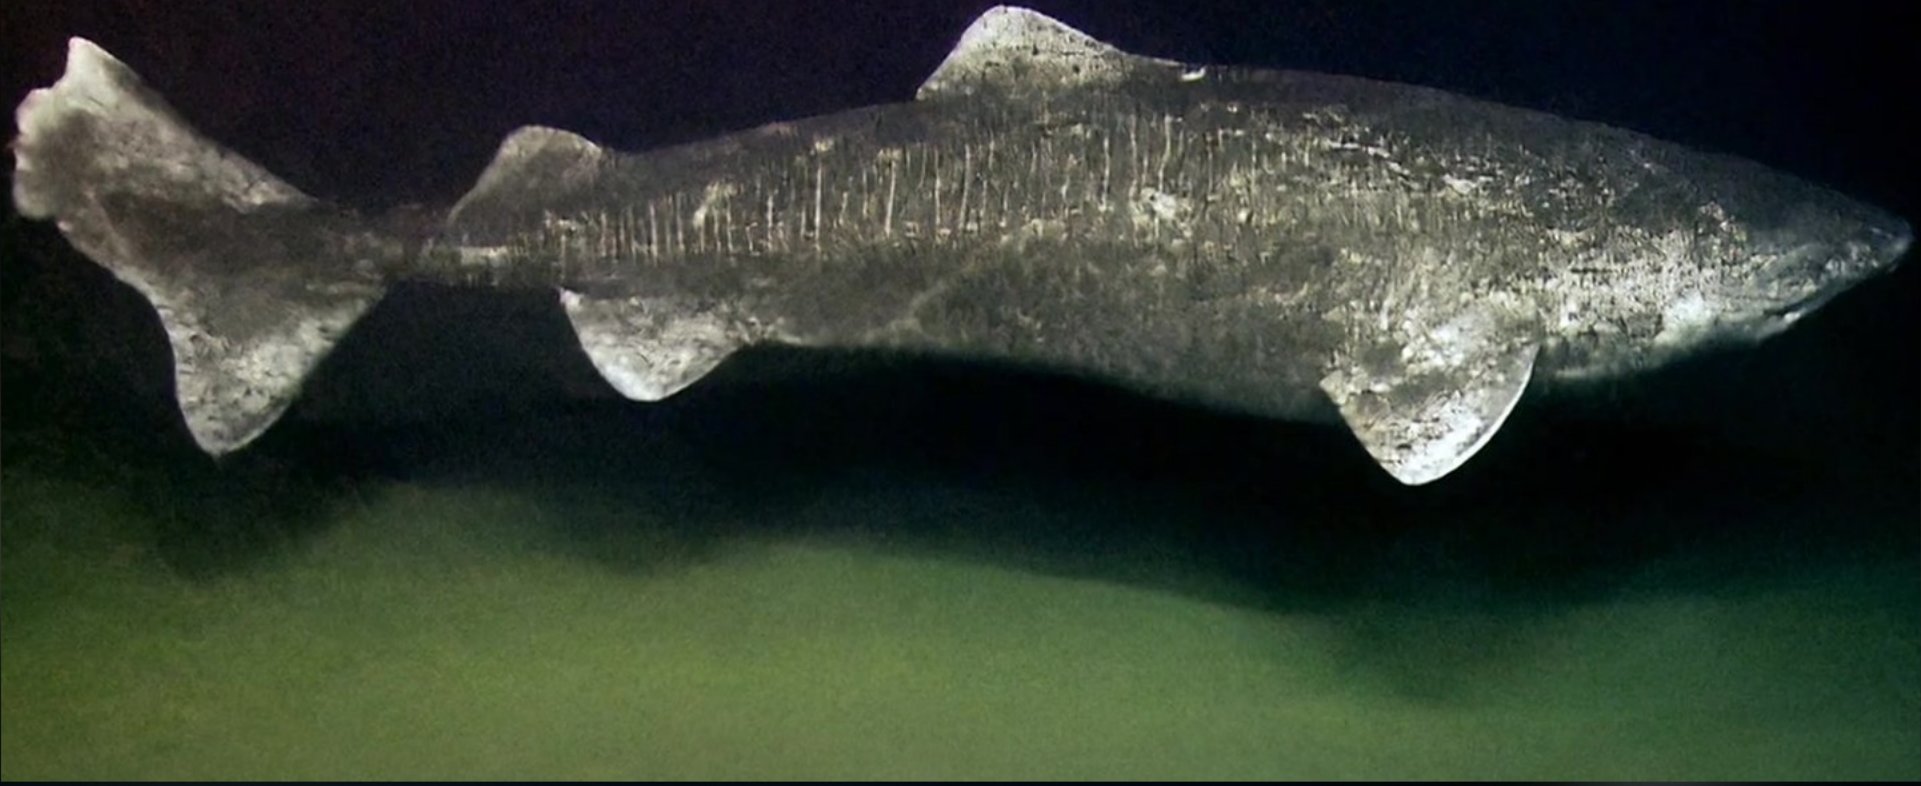

**Who lives in this cold, dark
sea?**

Look!

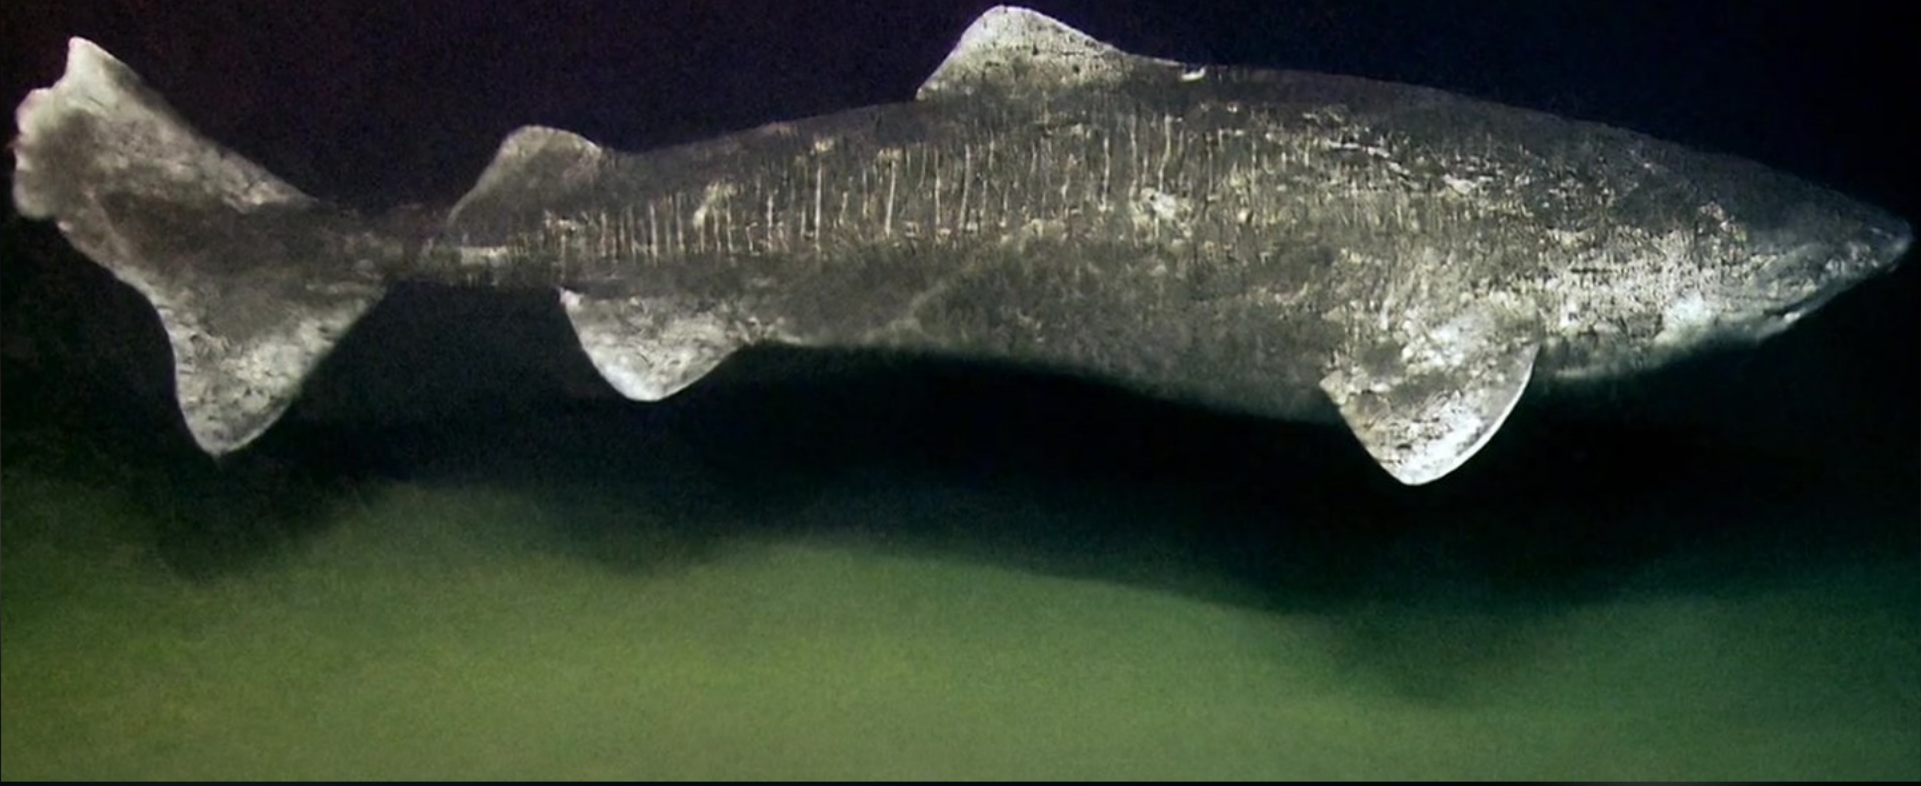

A shark is coming.

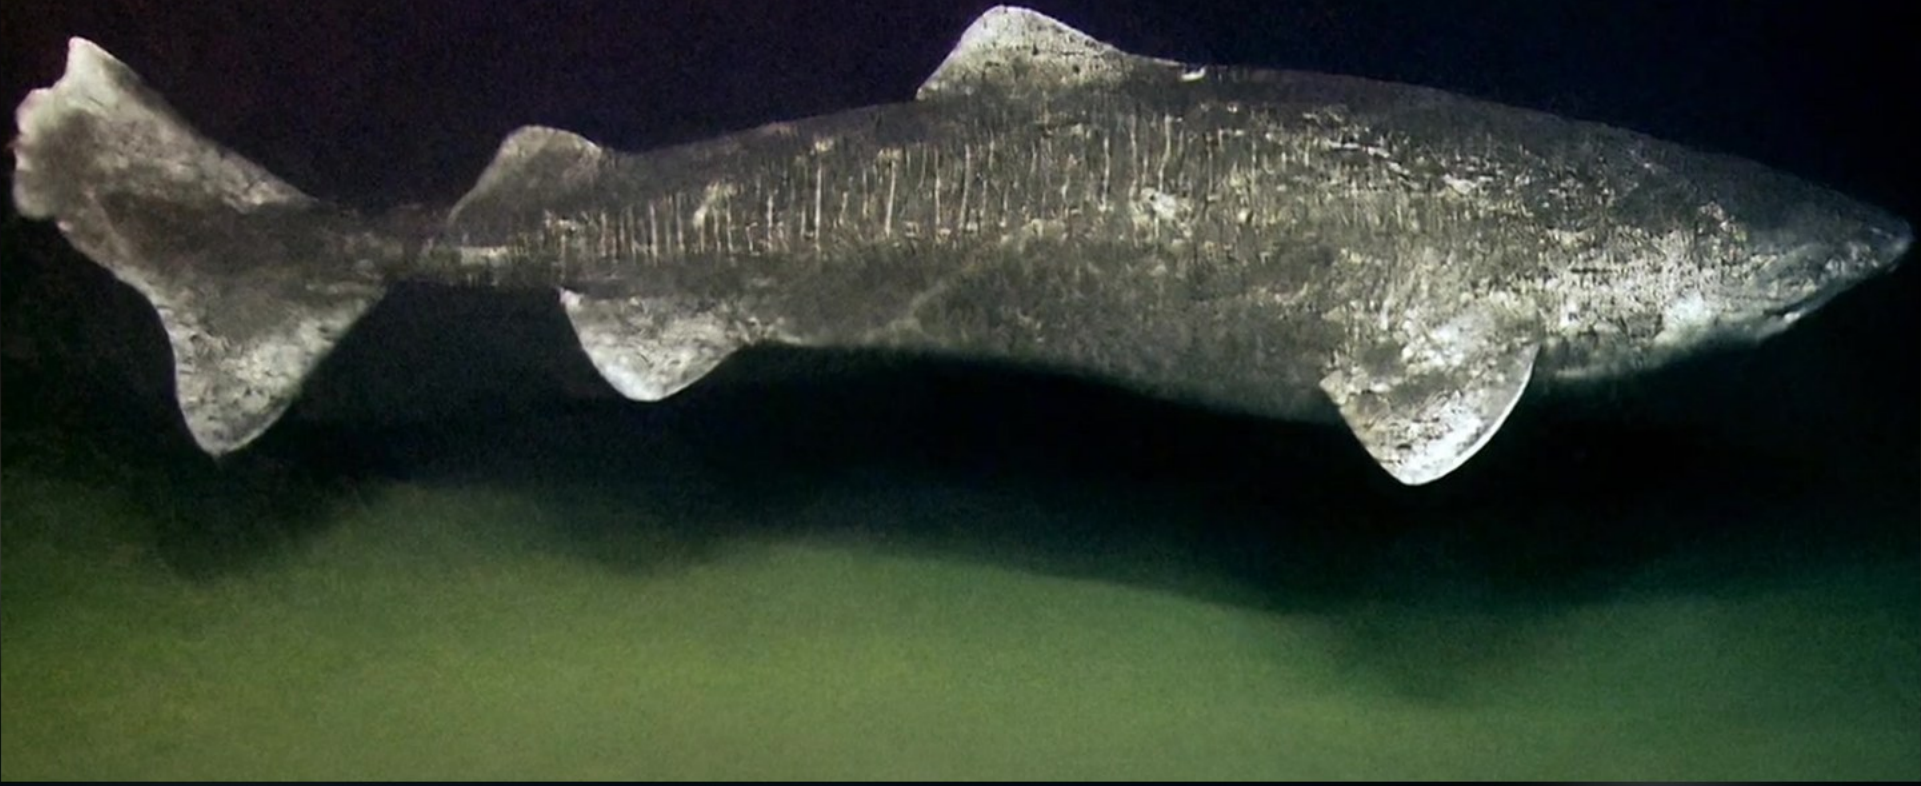

It is a Greenland shark!

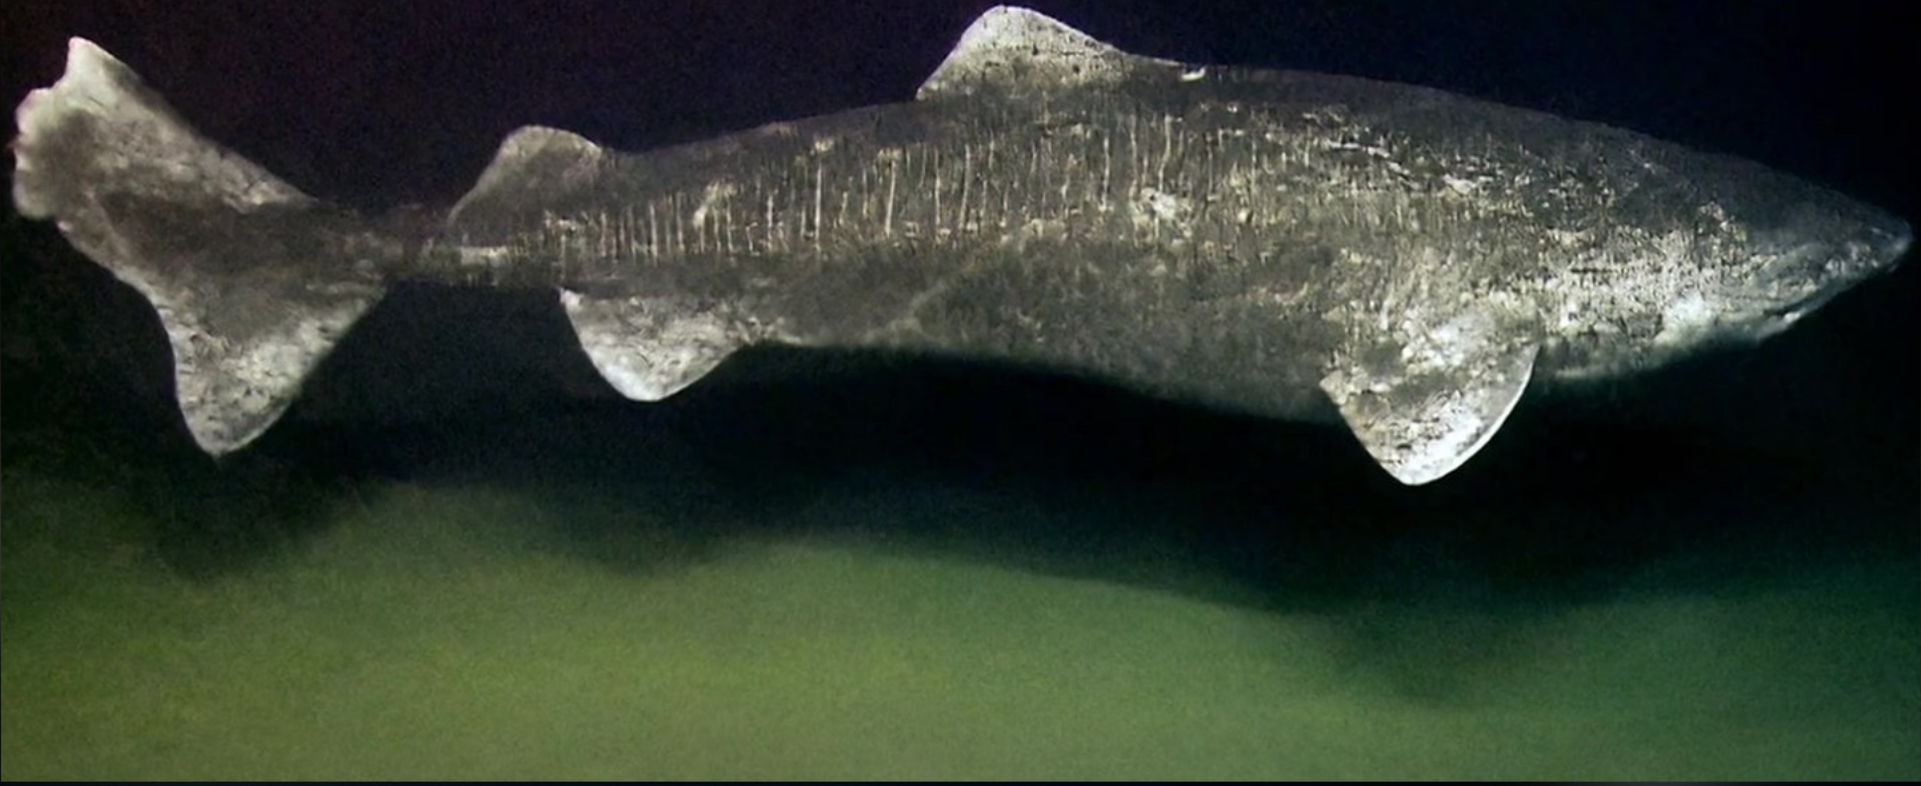

It lives in the cold sea near
Greenland.

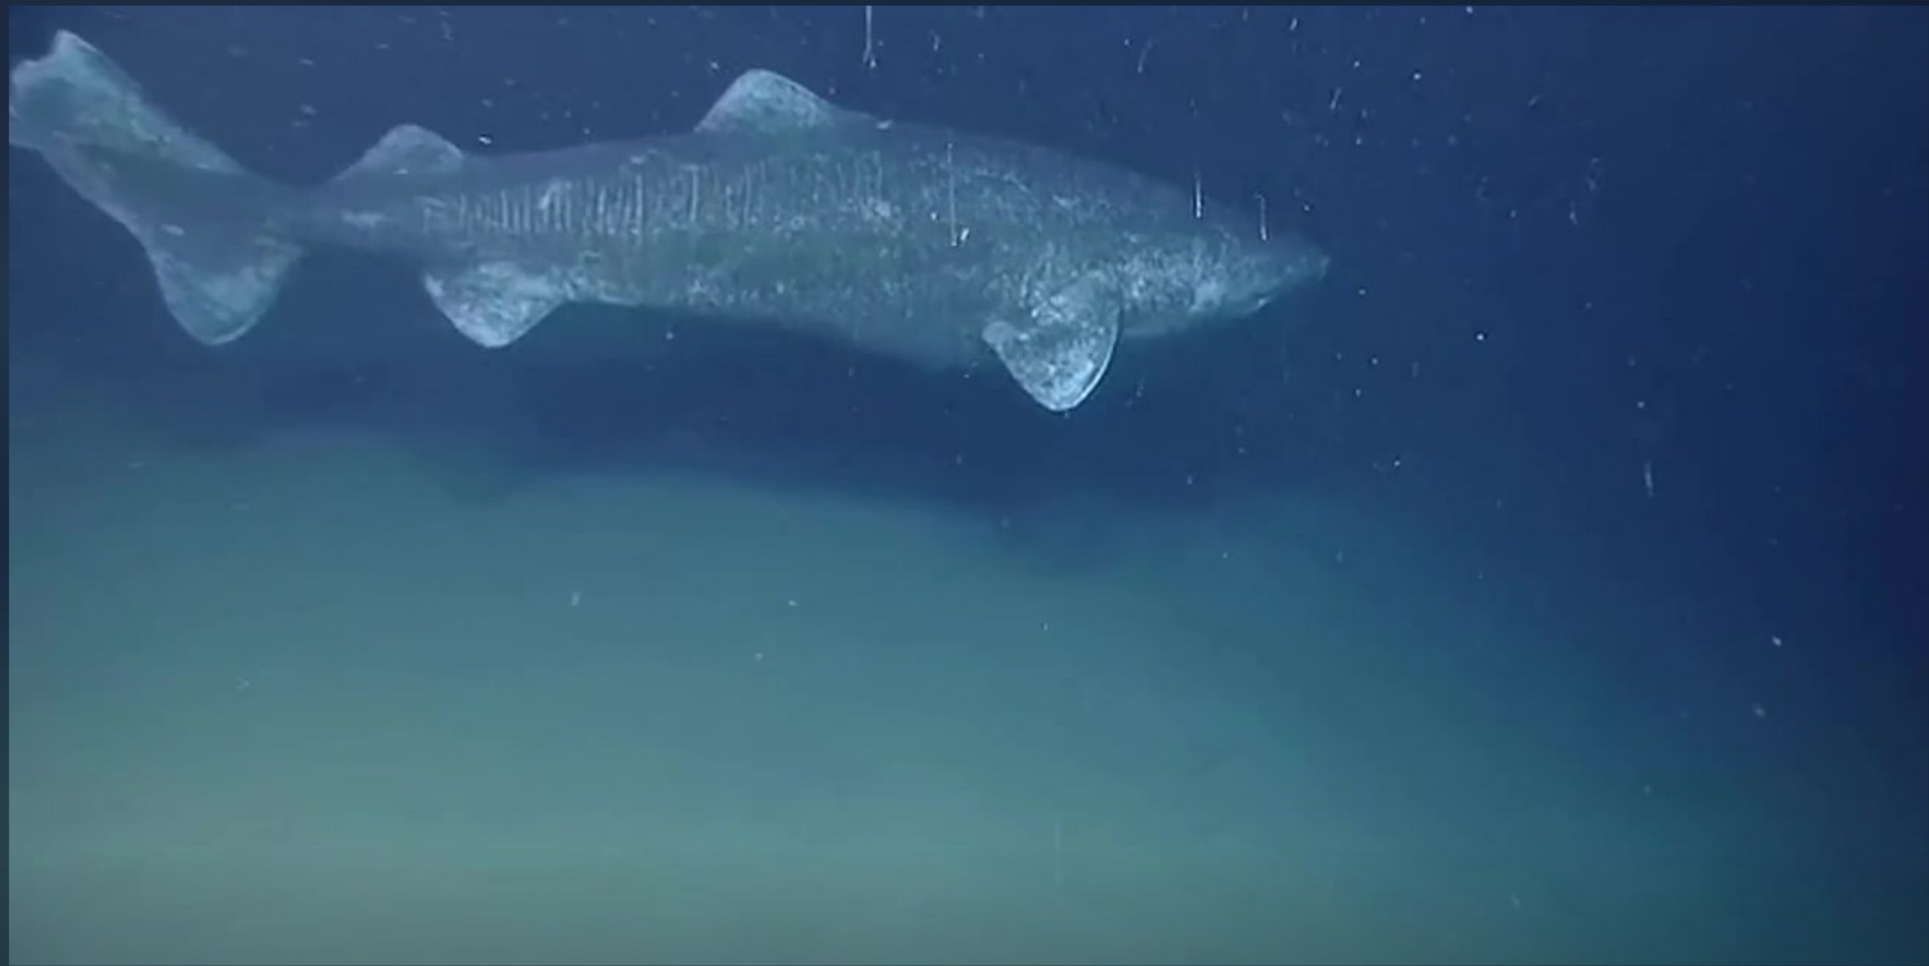

This shark is big.

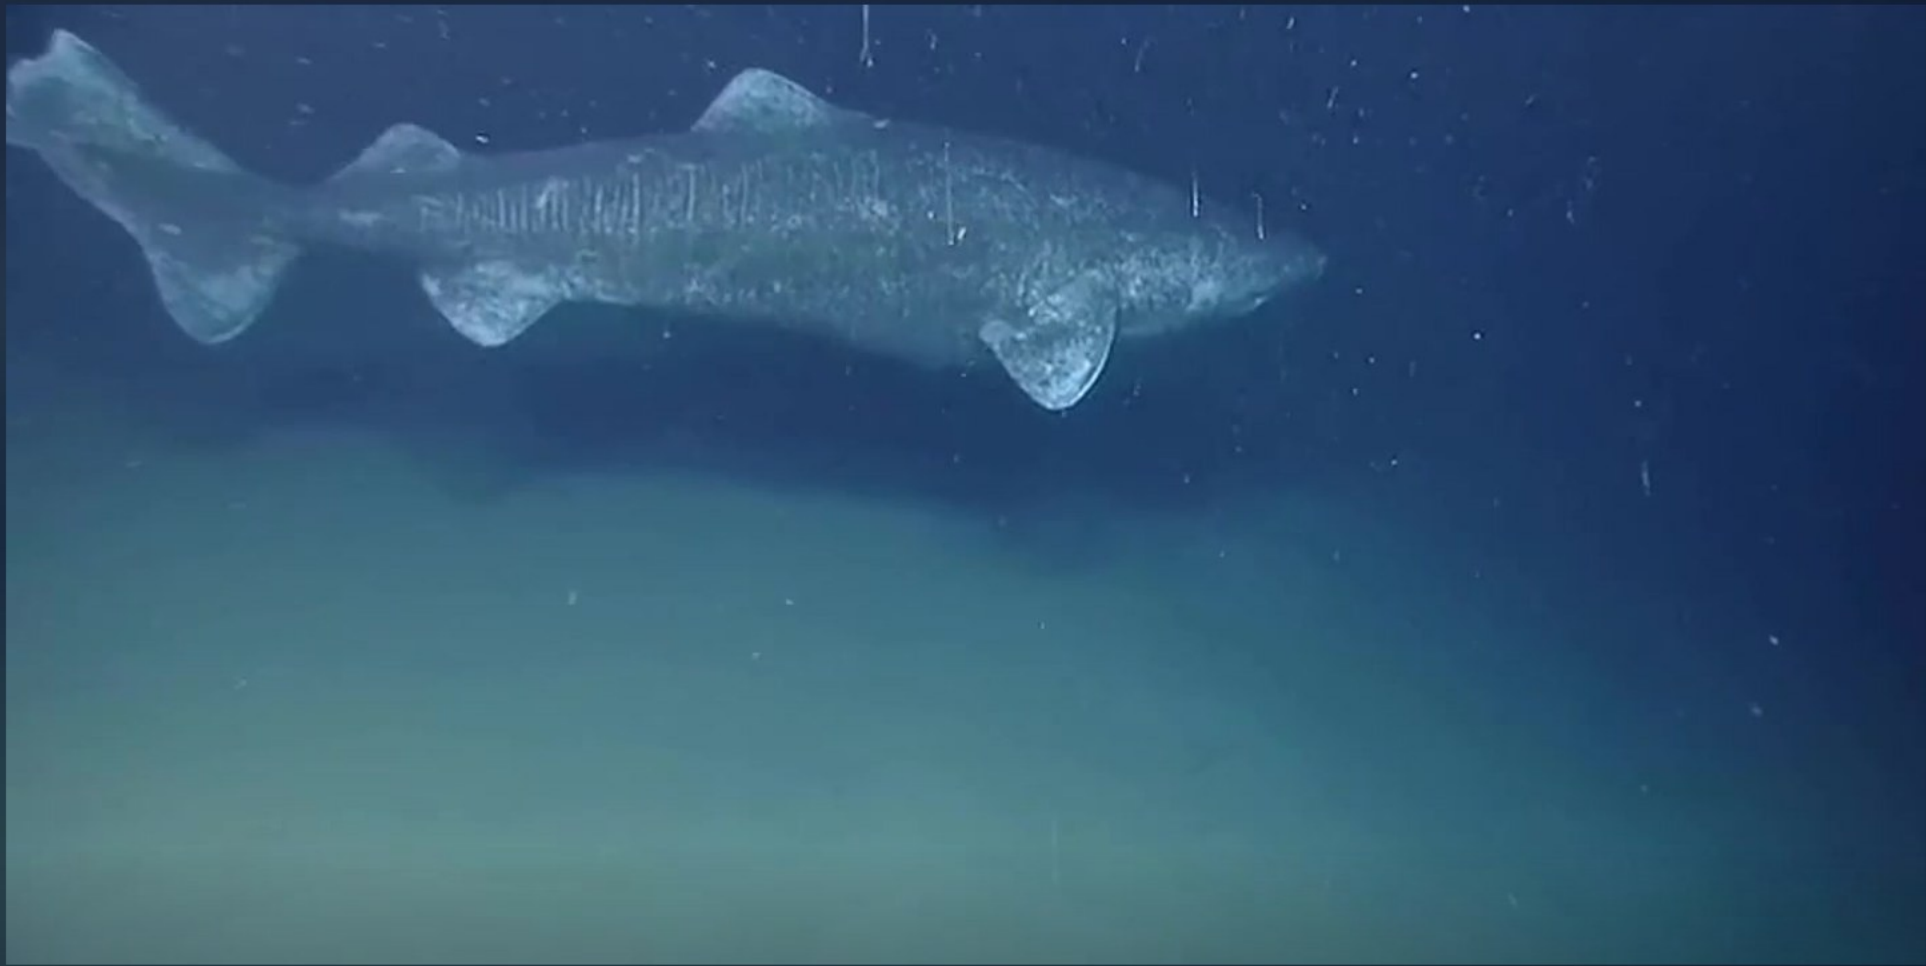

It can grow as long as a car!

Some grow even longer.

Look!

It is swimming.

It is swimming very, very slowly.

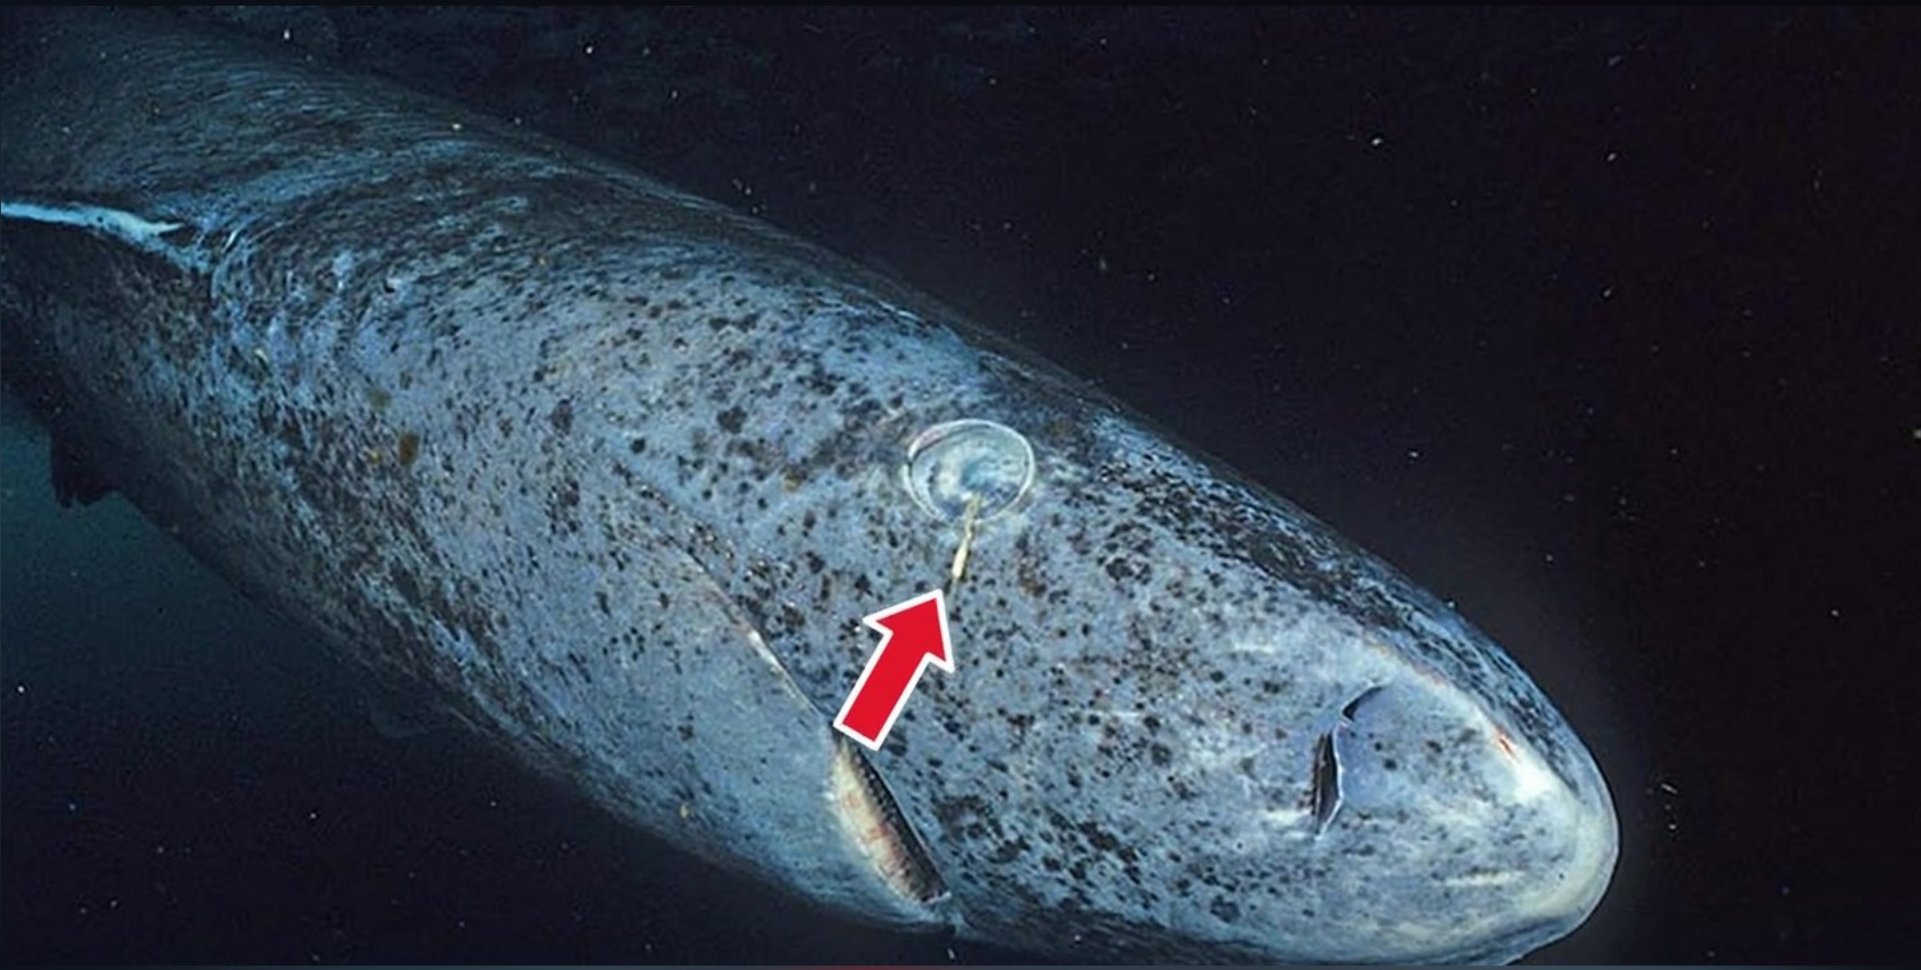

It is slower than you can walk.

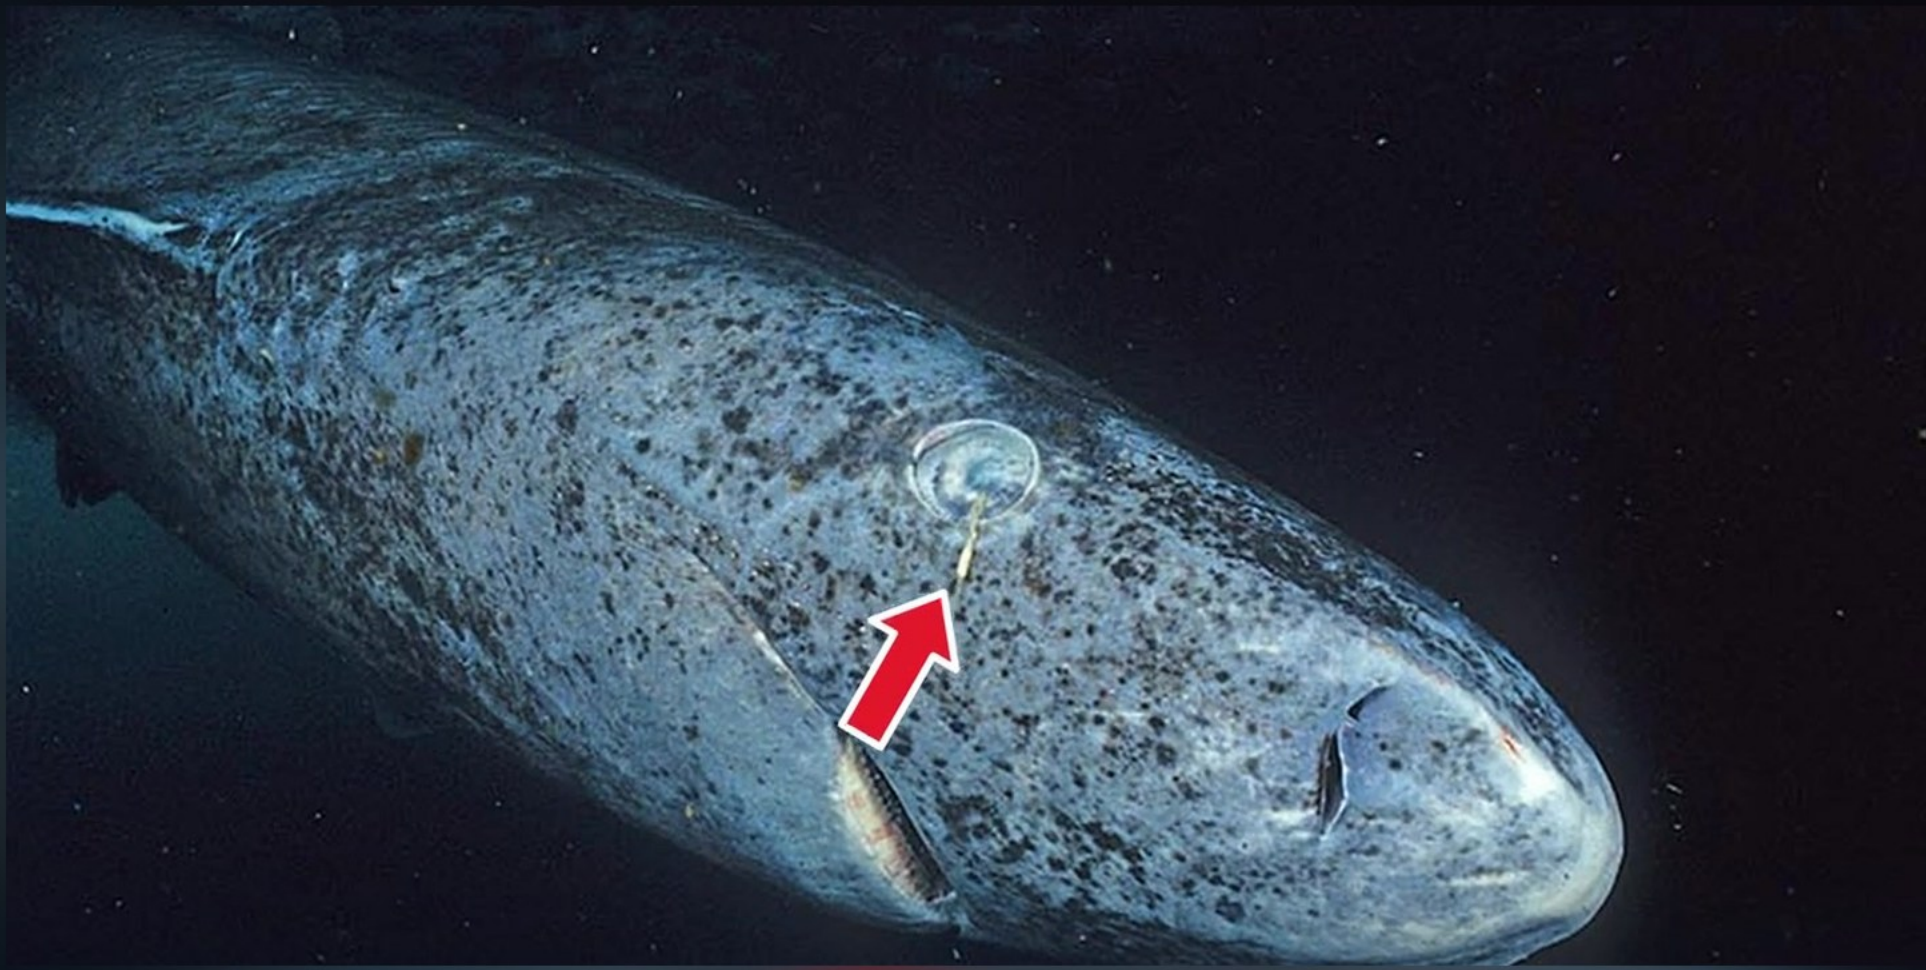

Its tail is going swish, swish.

Look at its eyes.

**Many have a tiny animal
hanging on one eye!**

It looks like a little white string.

So it may not see very well.

**But it finds food with a super
nose.**

Sniff, sniff!

It eats fish.

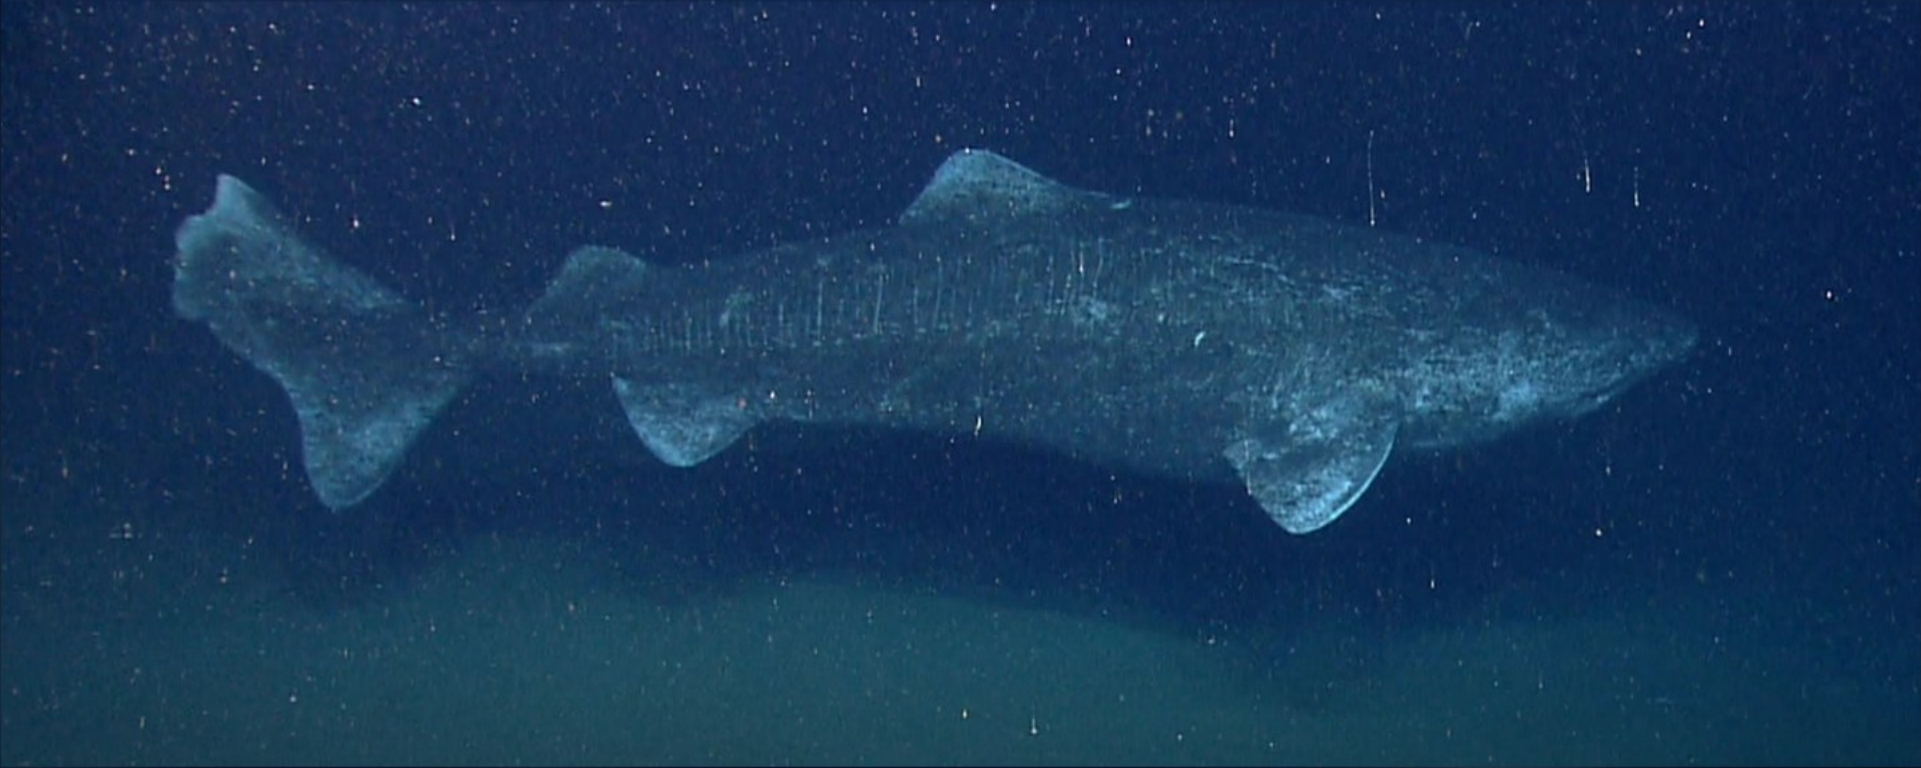

It even eats seals!

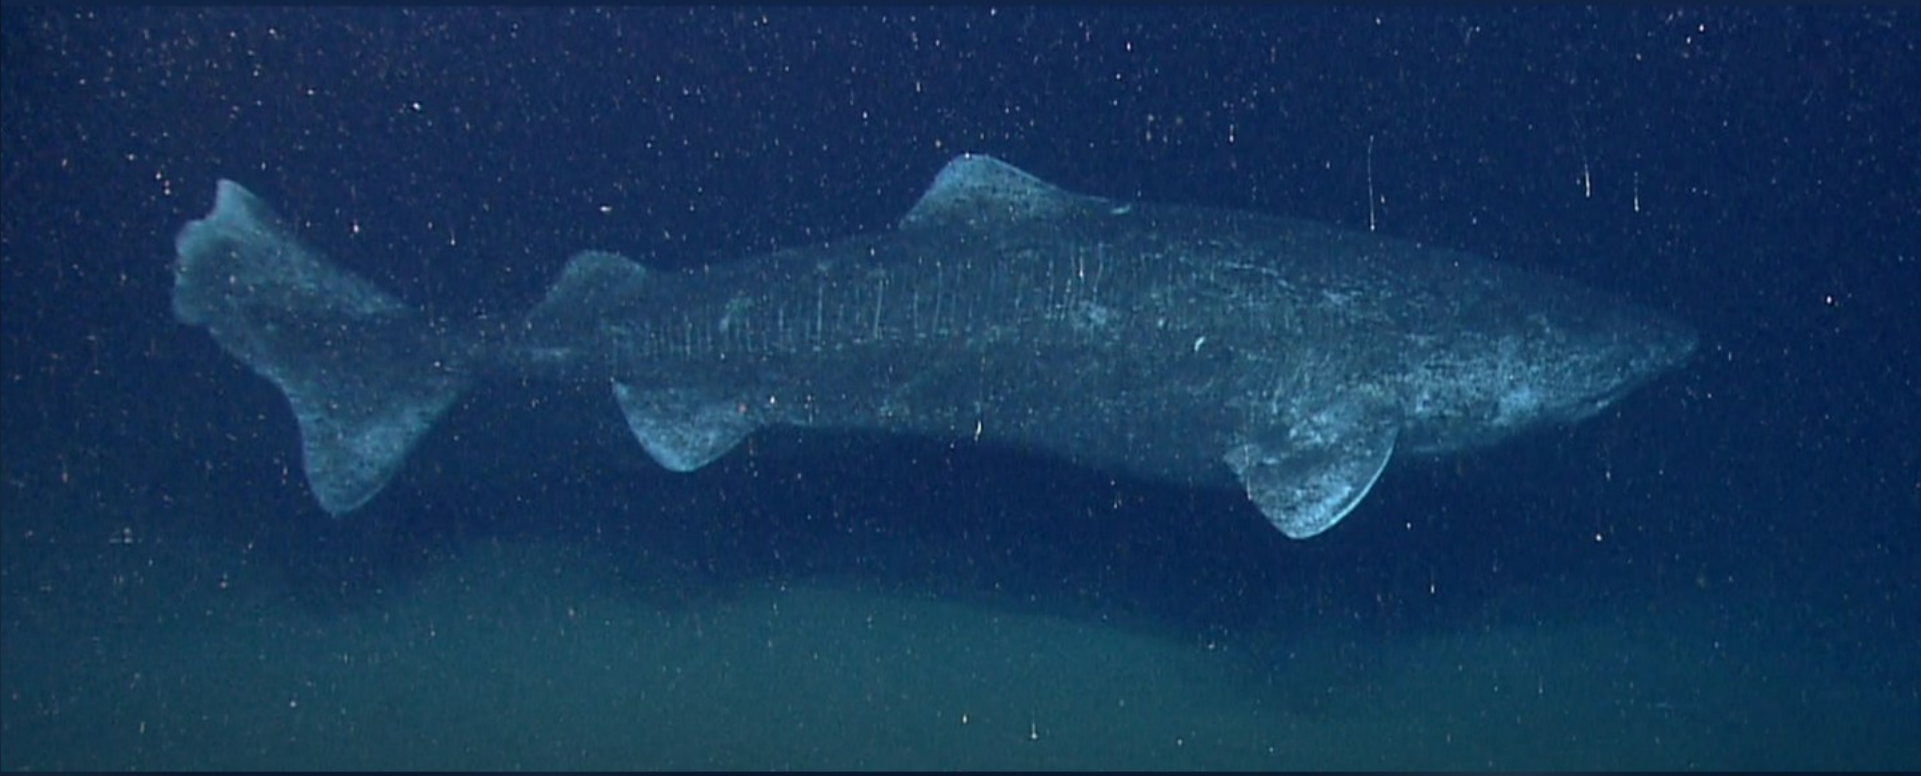

It also eats leftovers on the sea floor.

Now, here is a big surprise.

This shark can get very, very old.

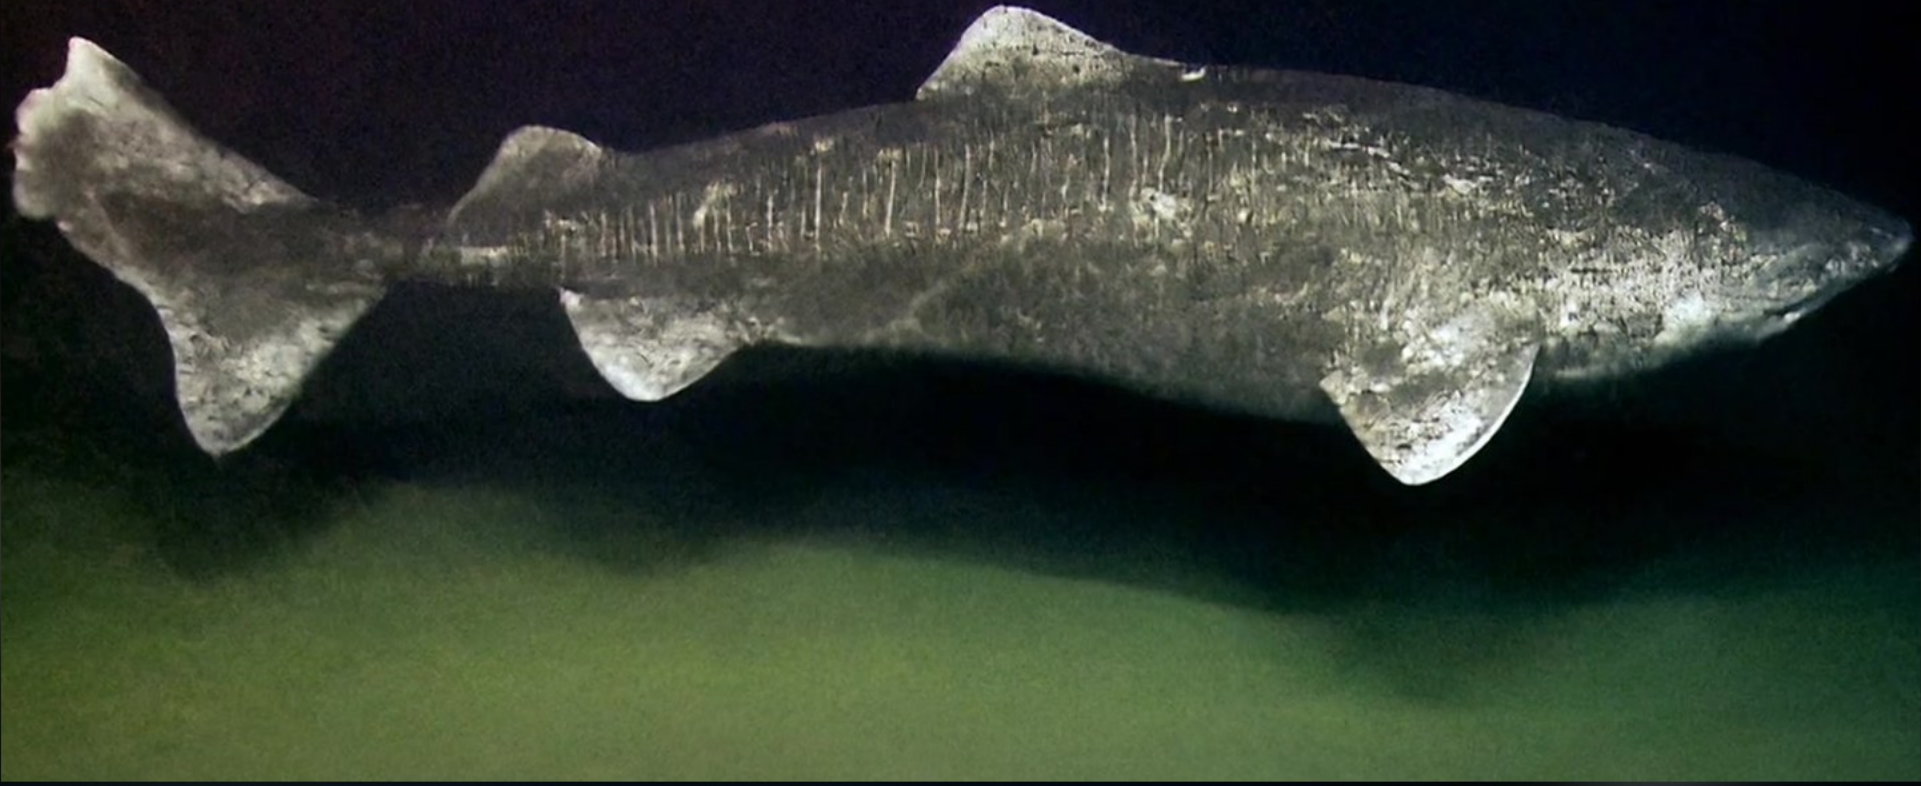

It can live for hundreds of
years!

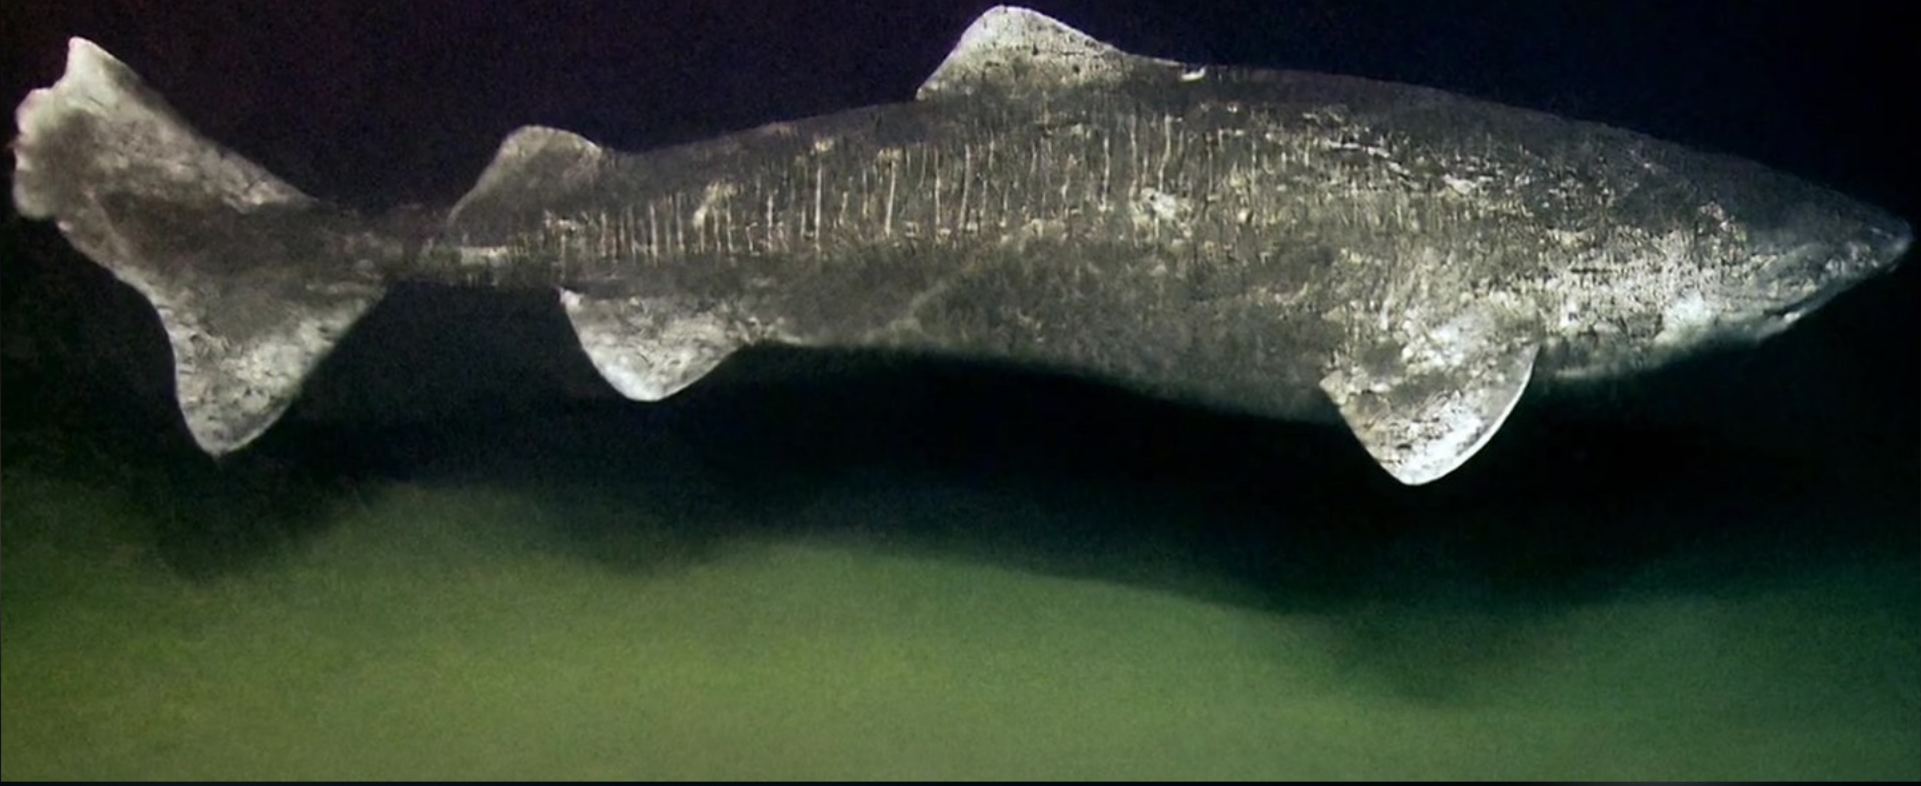

Some may be 400 years old.

That is older than your
great-great-great-grandma!

Let's say the words.

Greenland shark.

Ice.

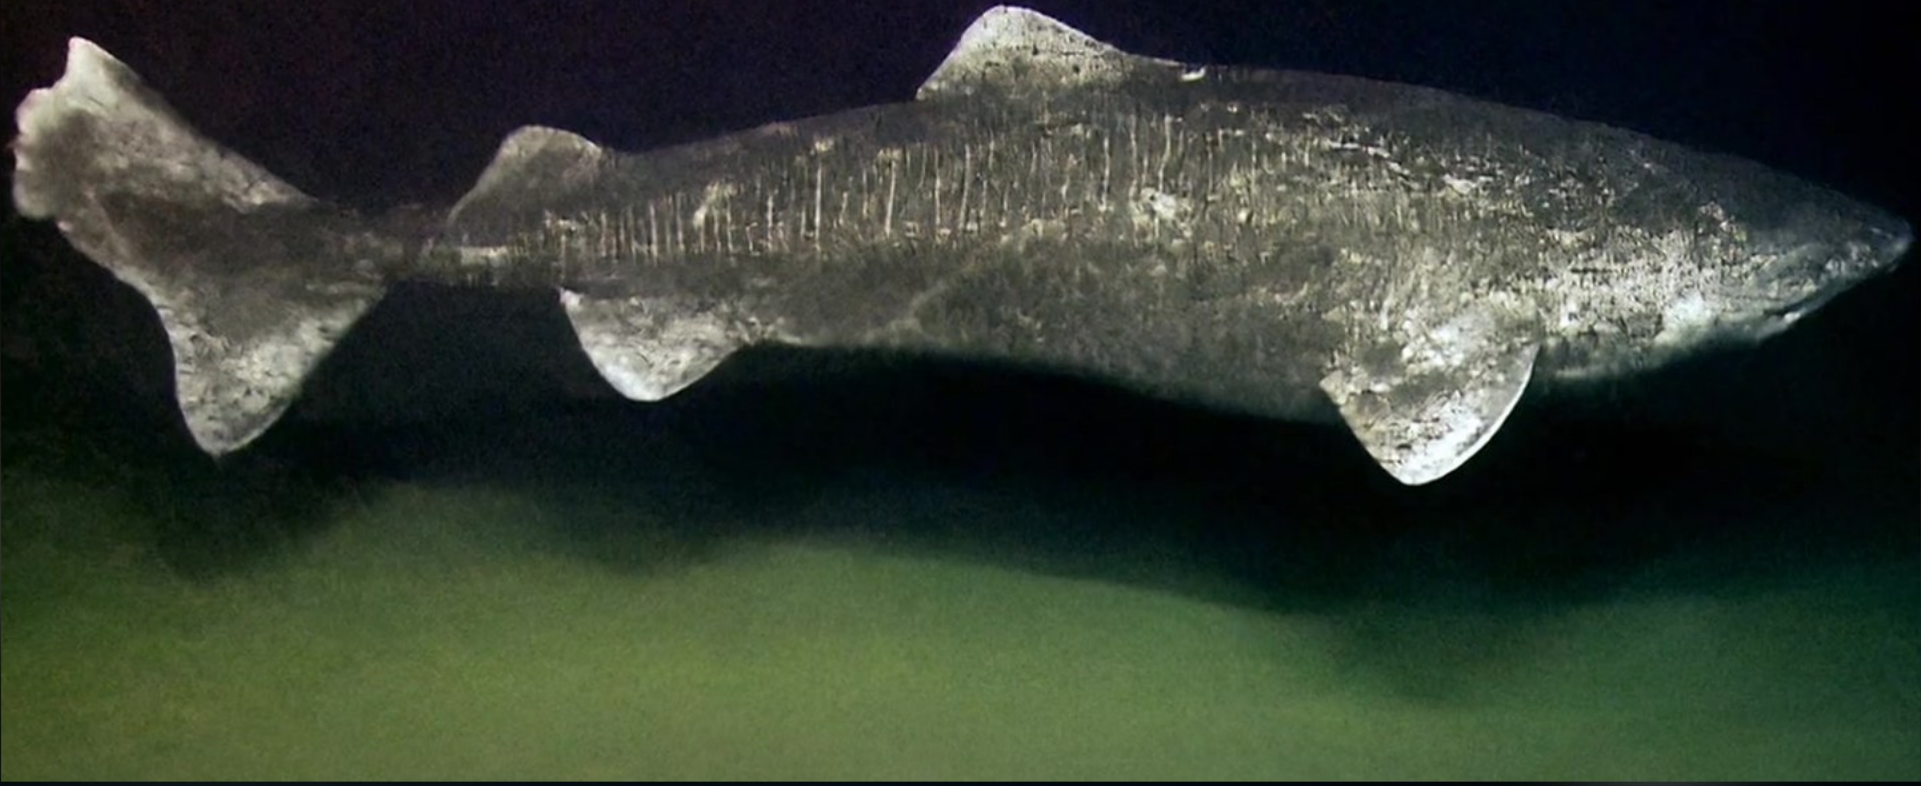

Cold.

Deep.

Dark.

Big.

Swim.

Slow.

Eyes.

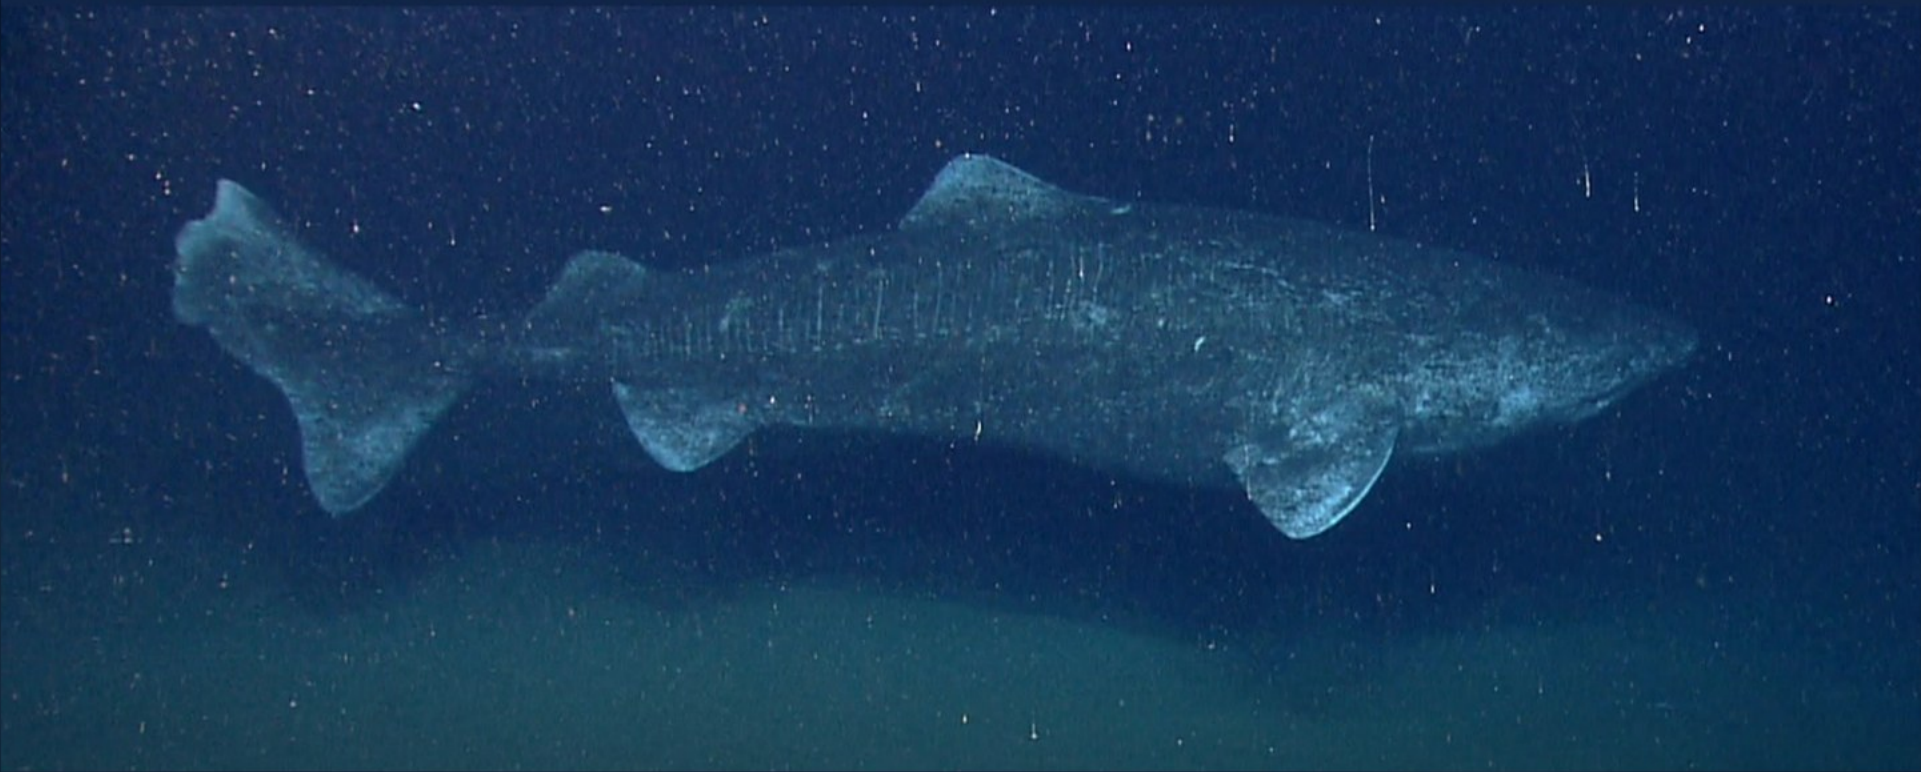

Nose.

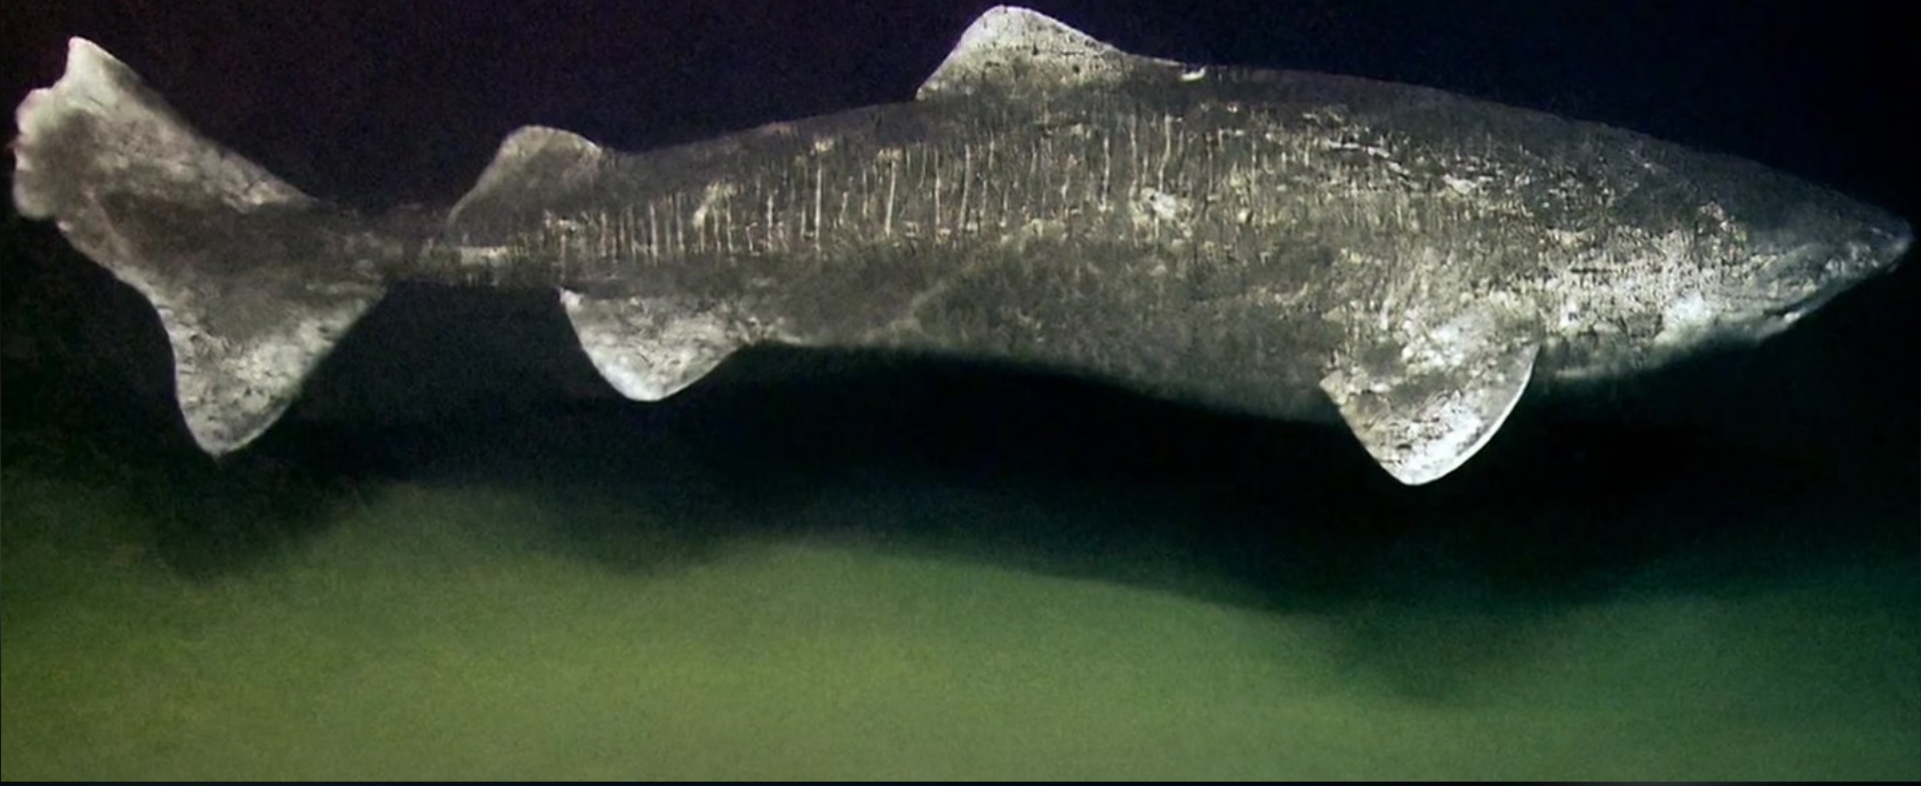

Fish.

Seal.

Old.

Great job!

Bye-bye, Greenland shark!

It is swimming away, very slowly.

Oh, it is still here!

It is so slow!

See you next time!
