

Hi, friends!

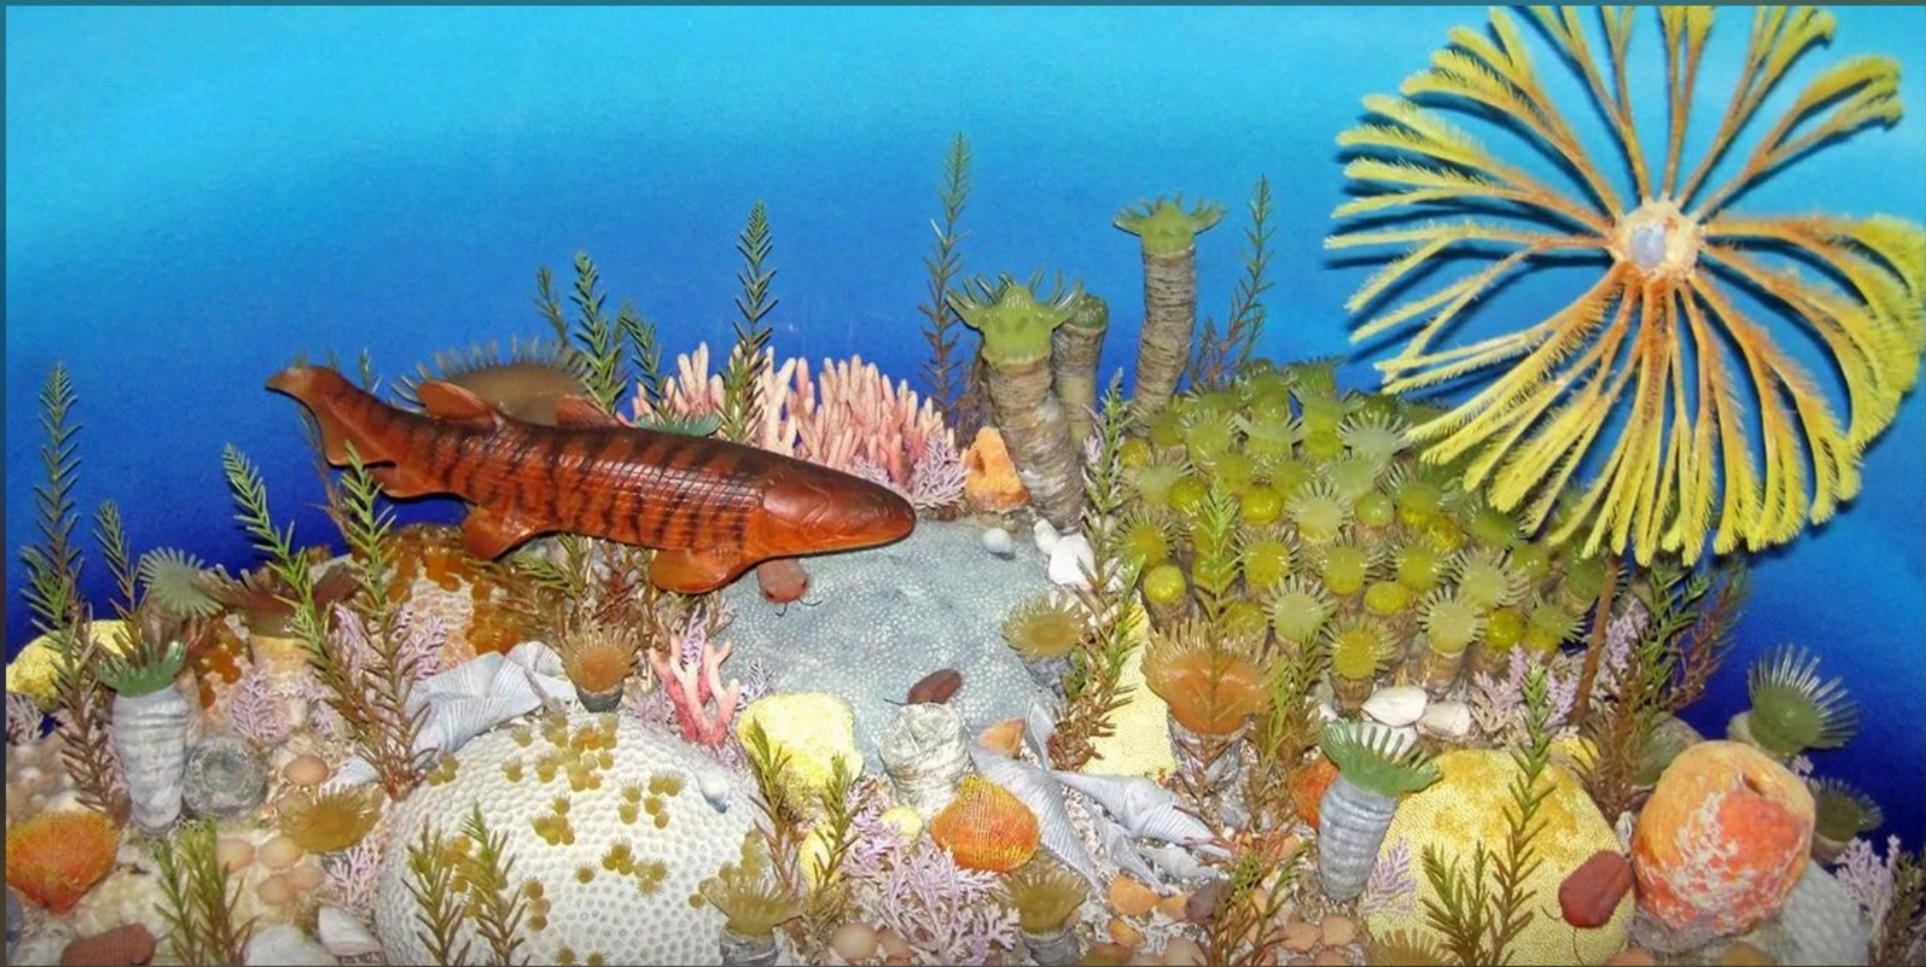

Let's visit an ancient ocean.

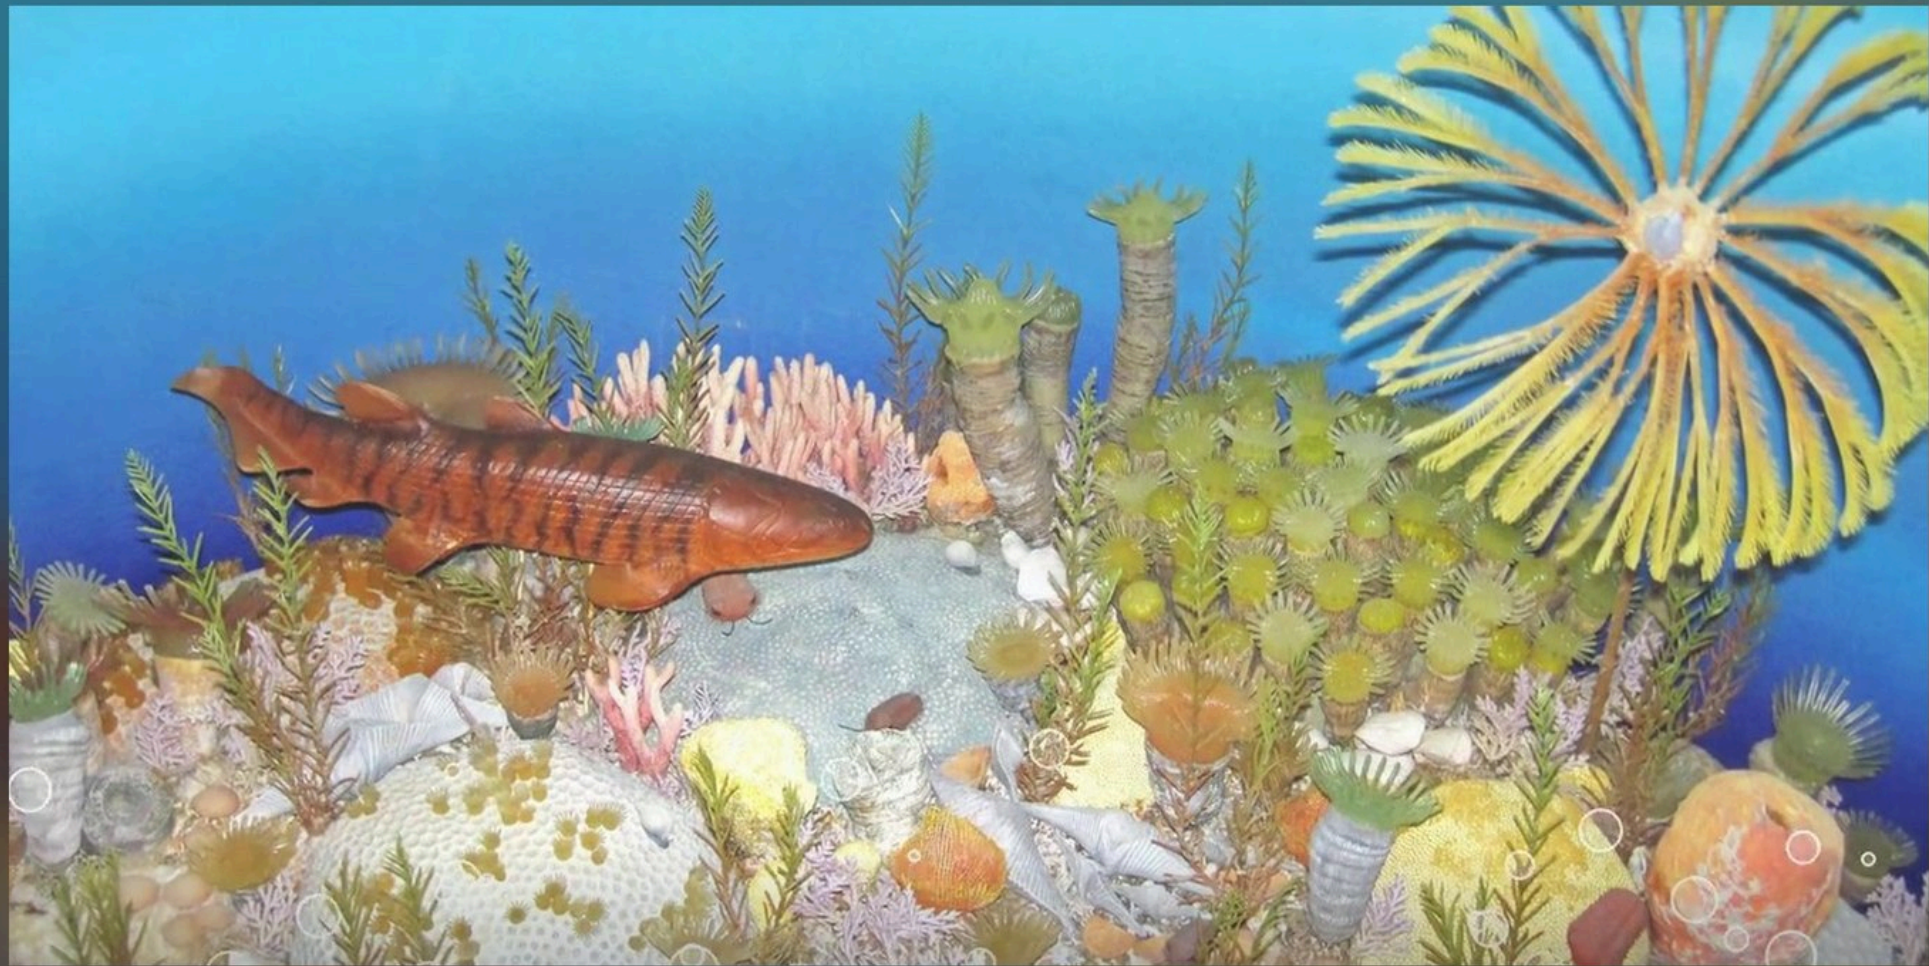

Ancient means very, very old.

We are going back long, long ago.

Before dinosaurs.

Splash!

Who is this?

It is Dunkleosteus.

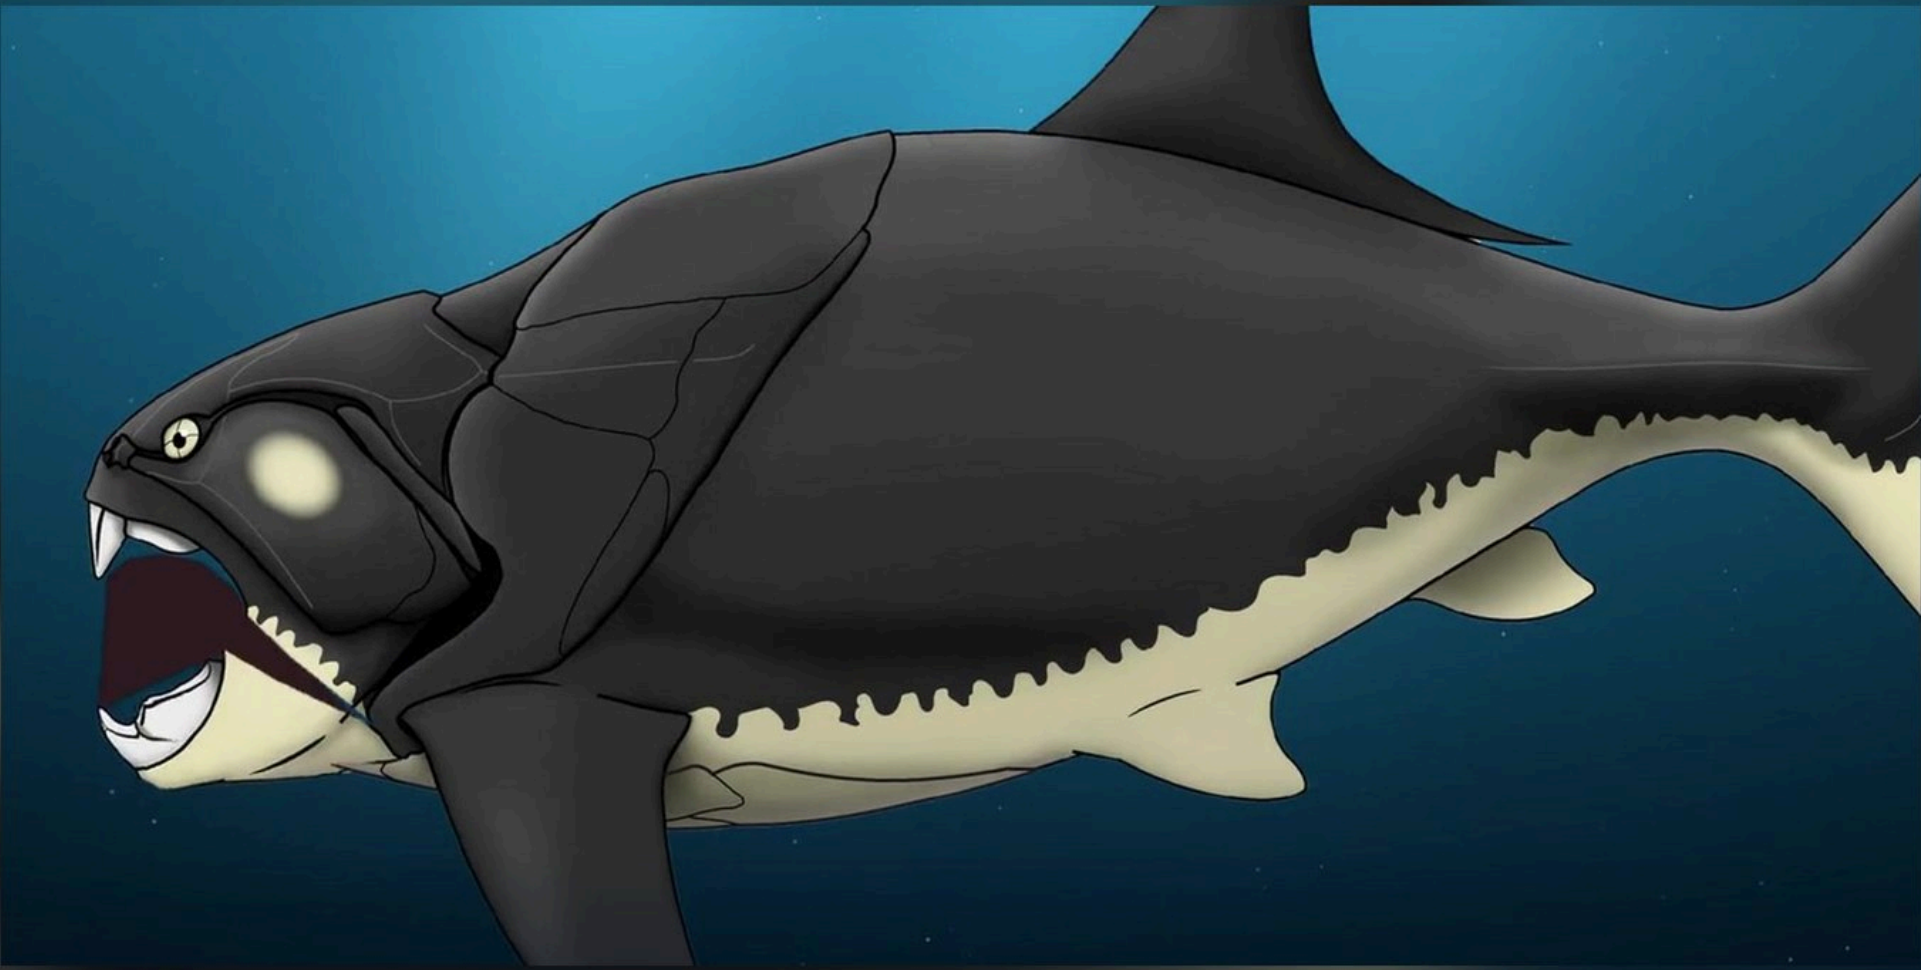

We can call it Dunk.

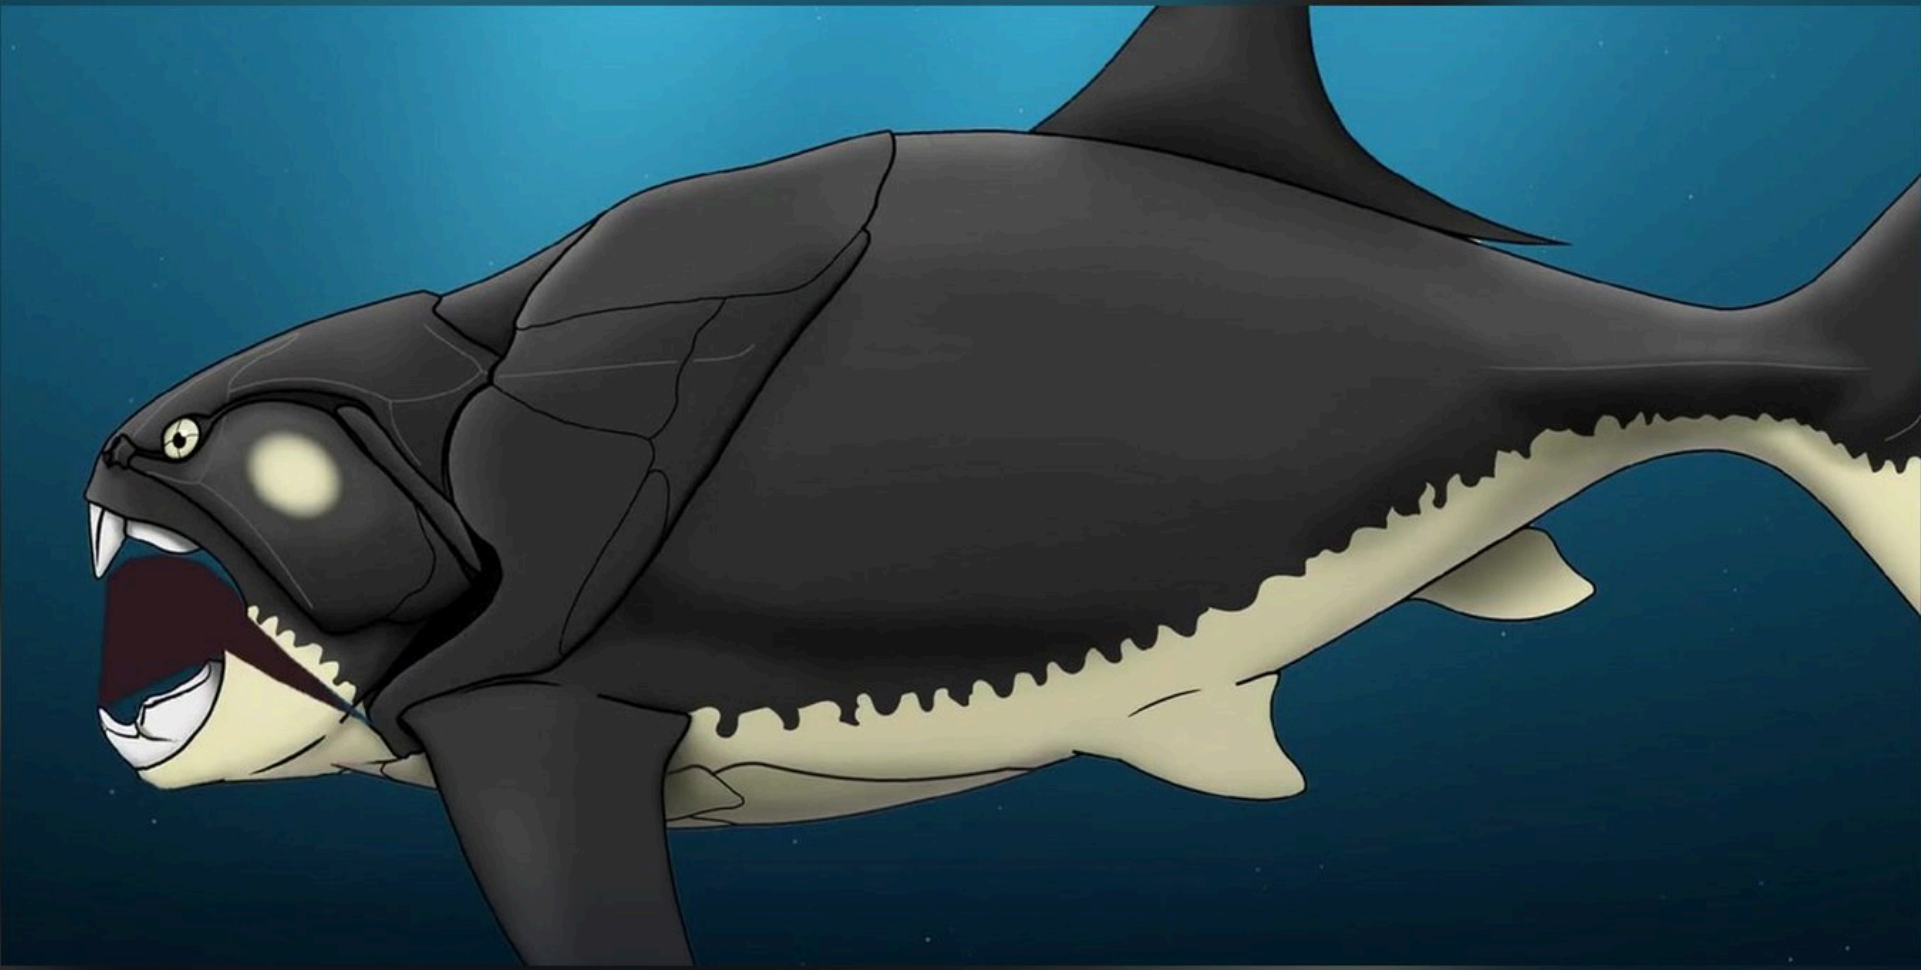

Dunk is a fish.

A big, big fish.

It is as long as a small car.

Look, it is swimming.

Look at its head.

Its head has hard, bony armor.

It is like a knight's helmet.

These are its jaws.

Dunk has no teeth.

It has sharp bony blades.

They cut like scissors.

Snip, snip!

Now it is opening its mouth.

So fast!

Faster than you can blink.

Then it bites.

Chomp!

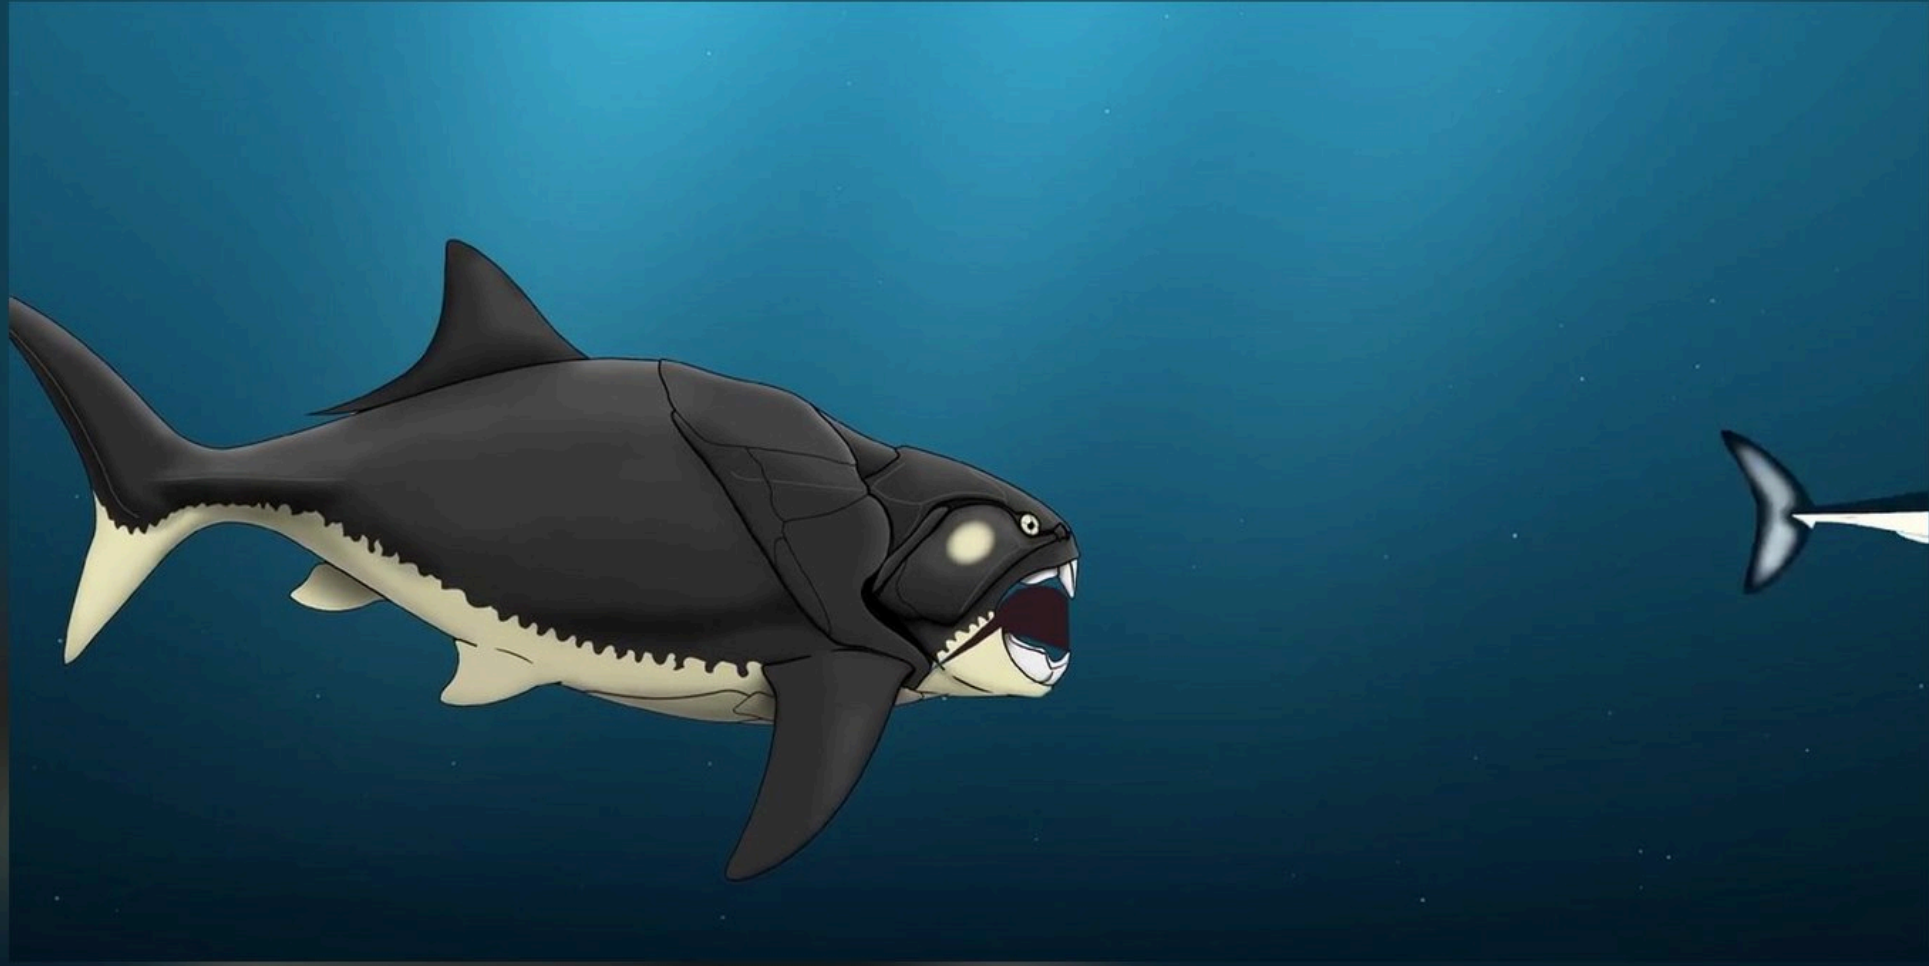

Its bite is super strong.

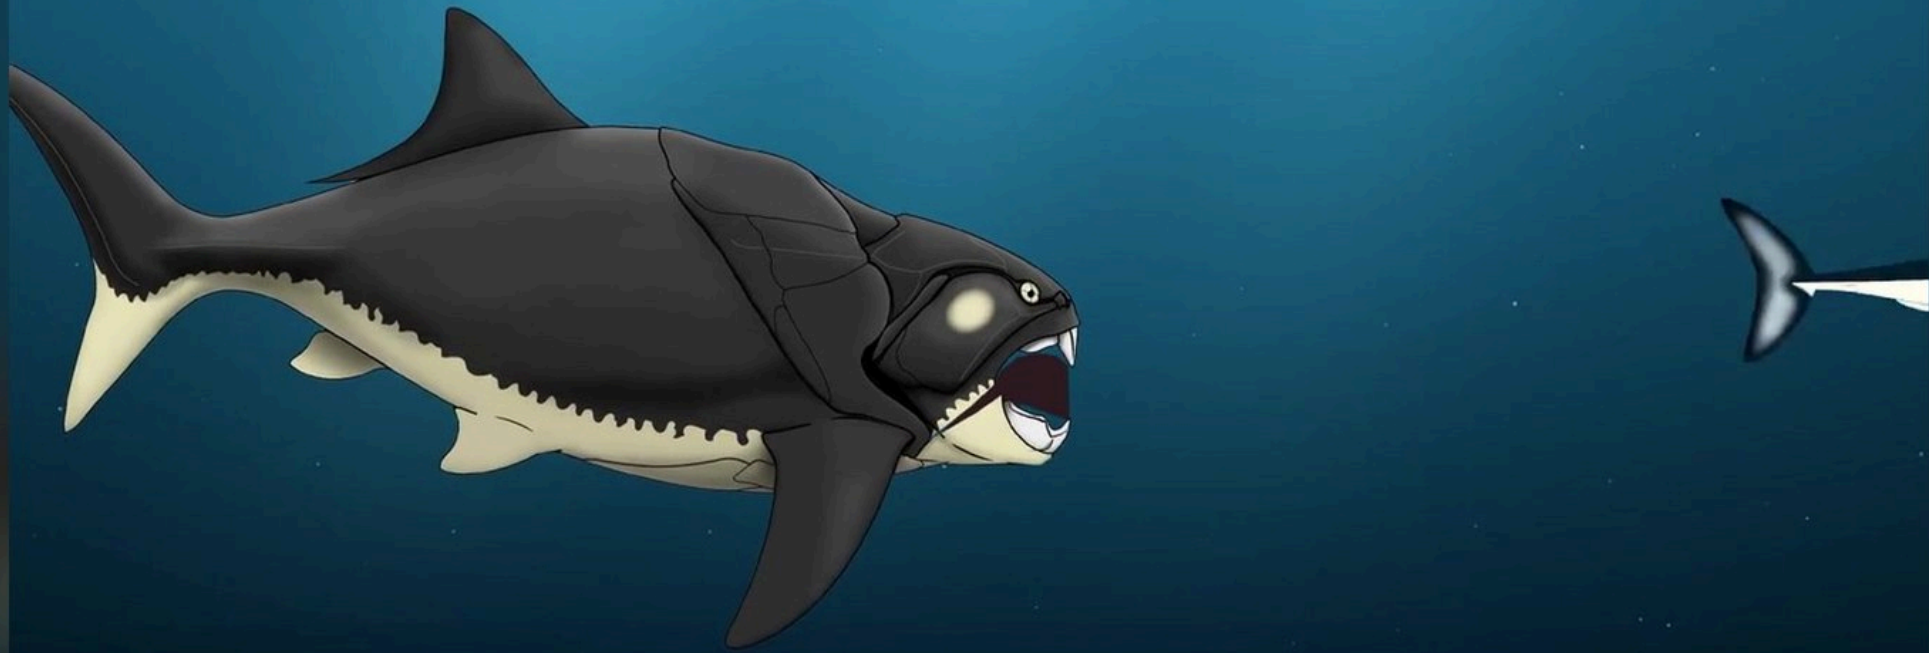

Now Dunk is hunting.

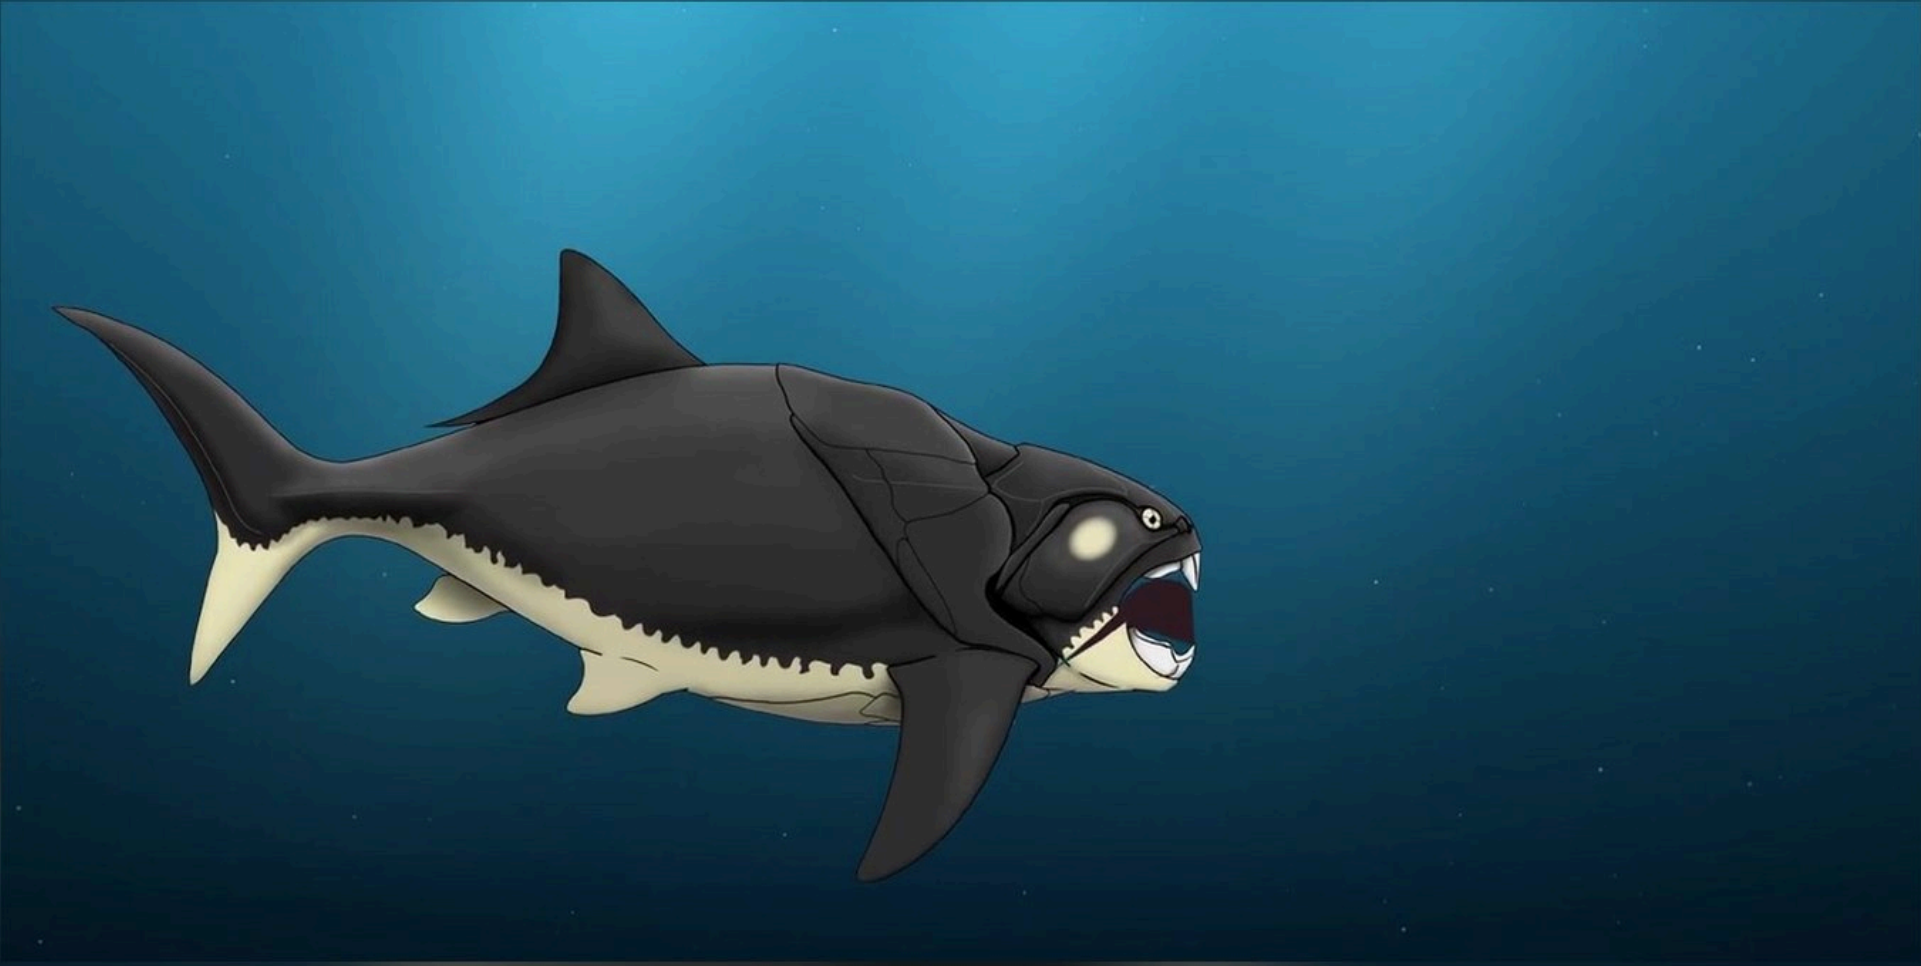

Look, a shark.

It eats sharks and other fish.

Swim away, little shark.

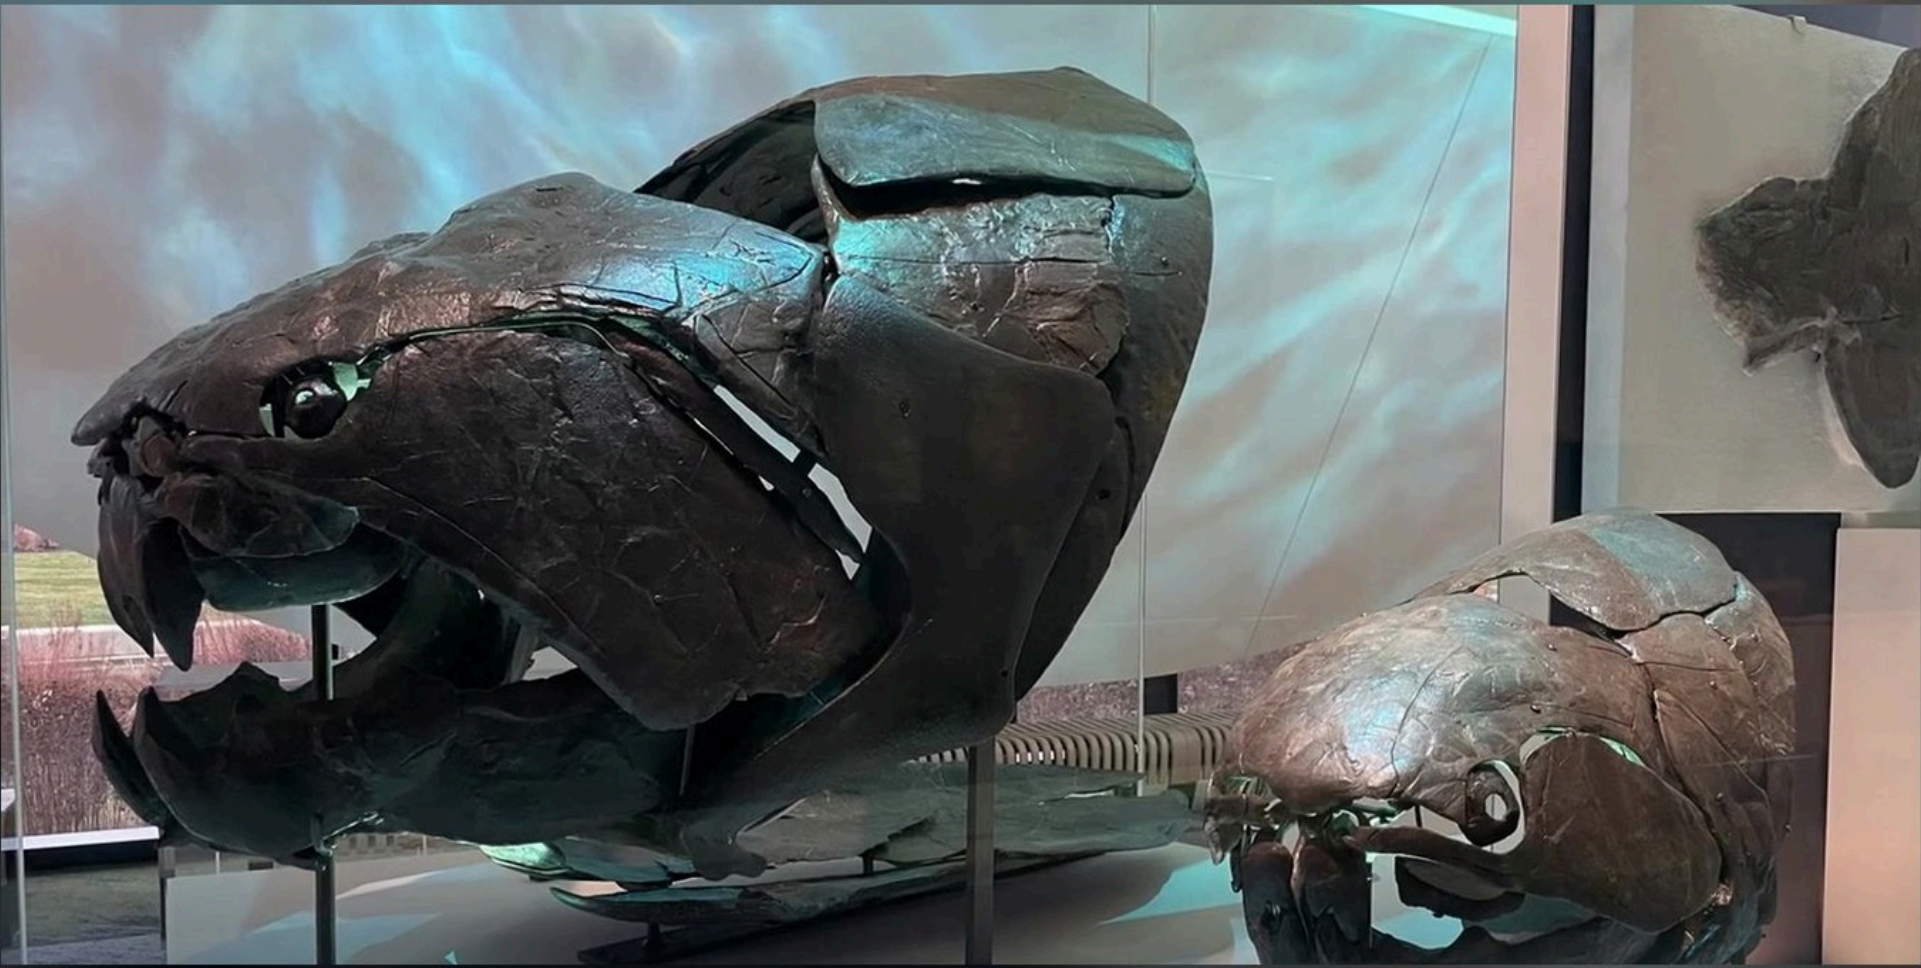

Yay, it got away!

People found its head in rocks.

Bones that turn into rock are called fossils.

You can see them in a
museum.

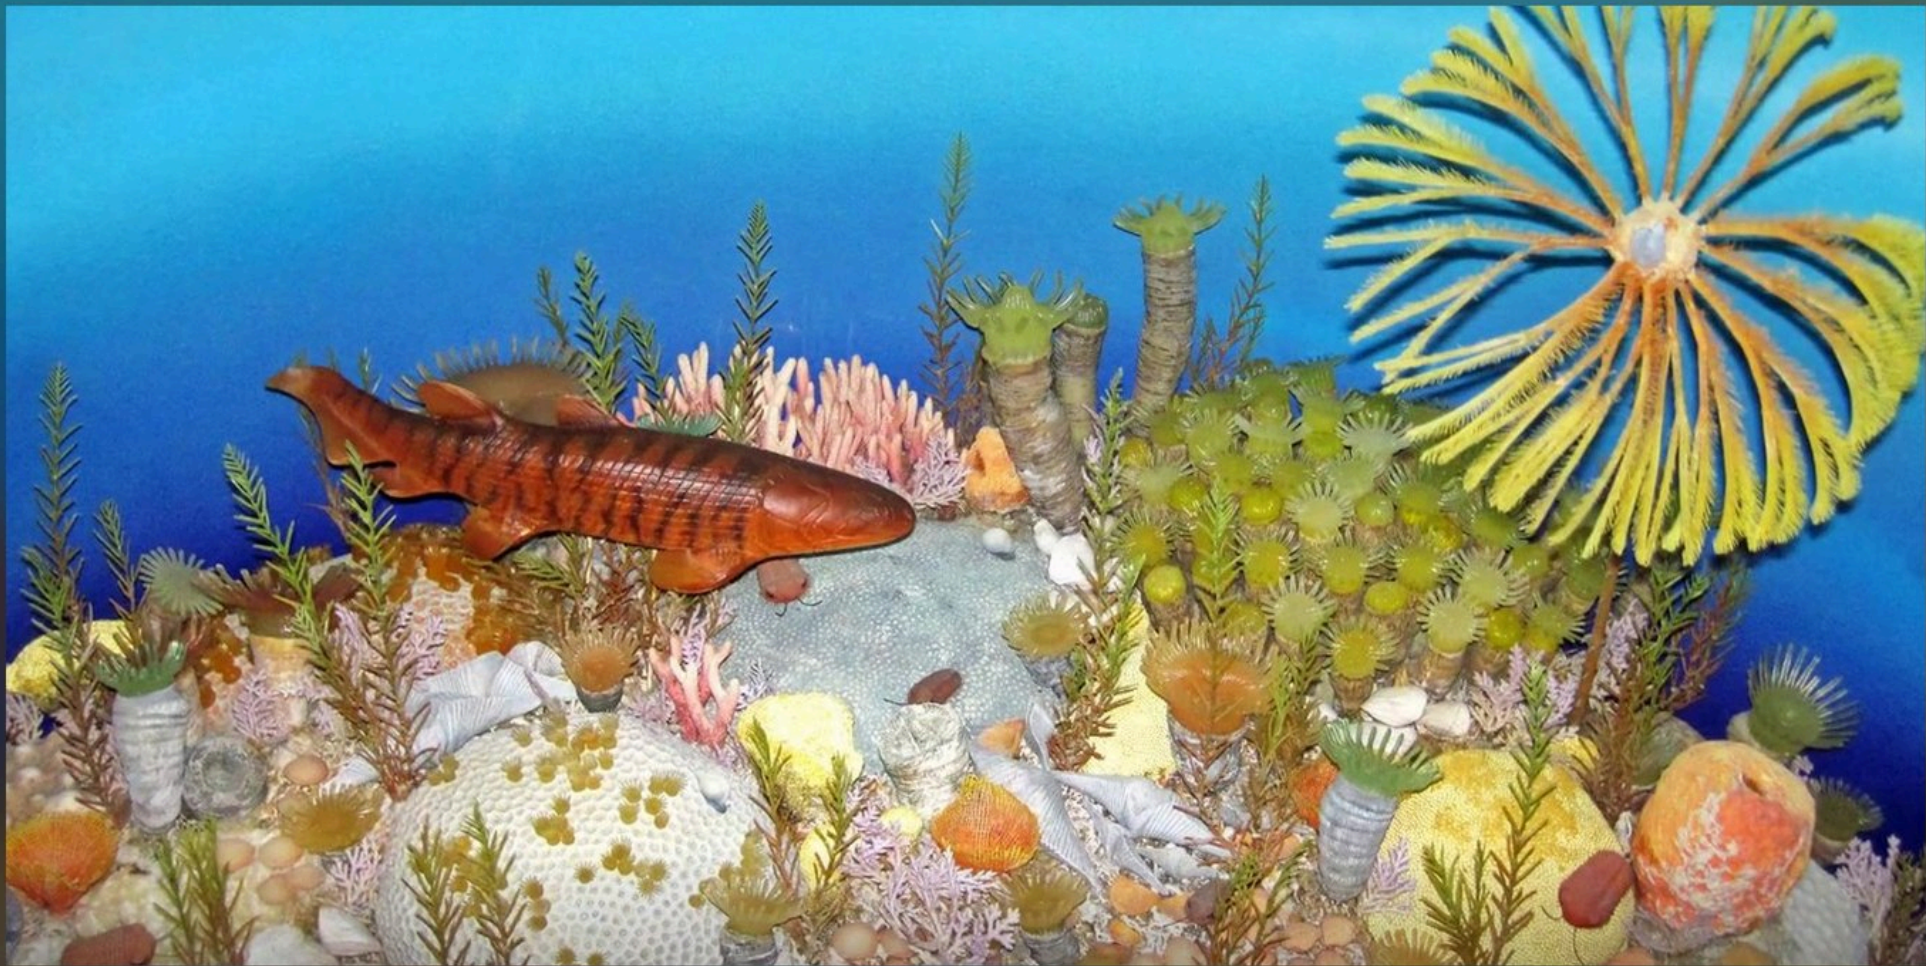

**Its body did not become a
fossil.**

So scientists make good
guesses.

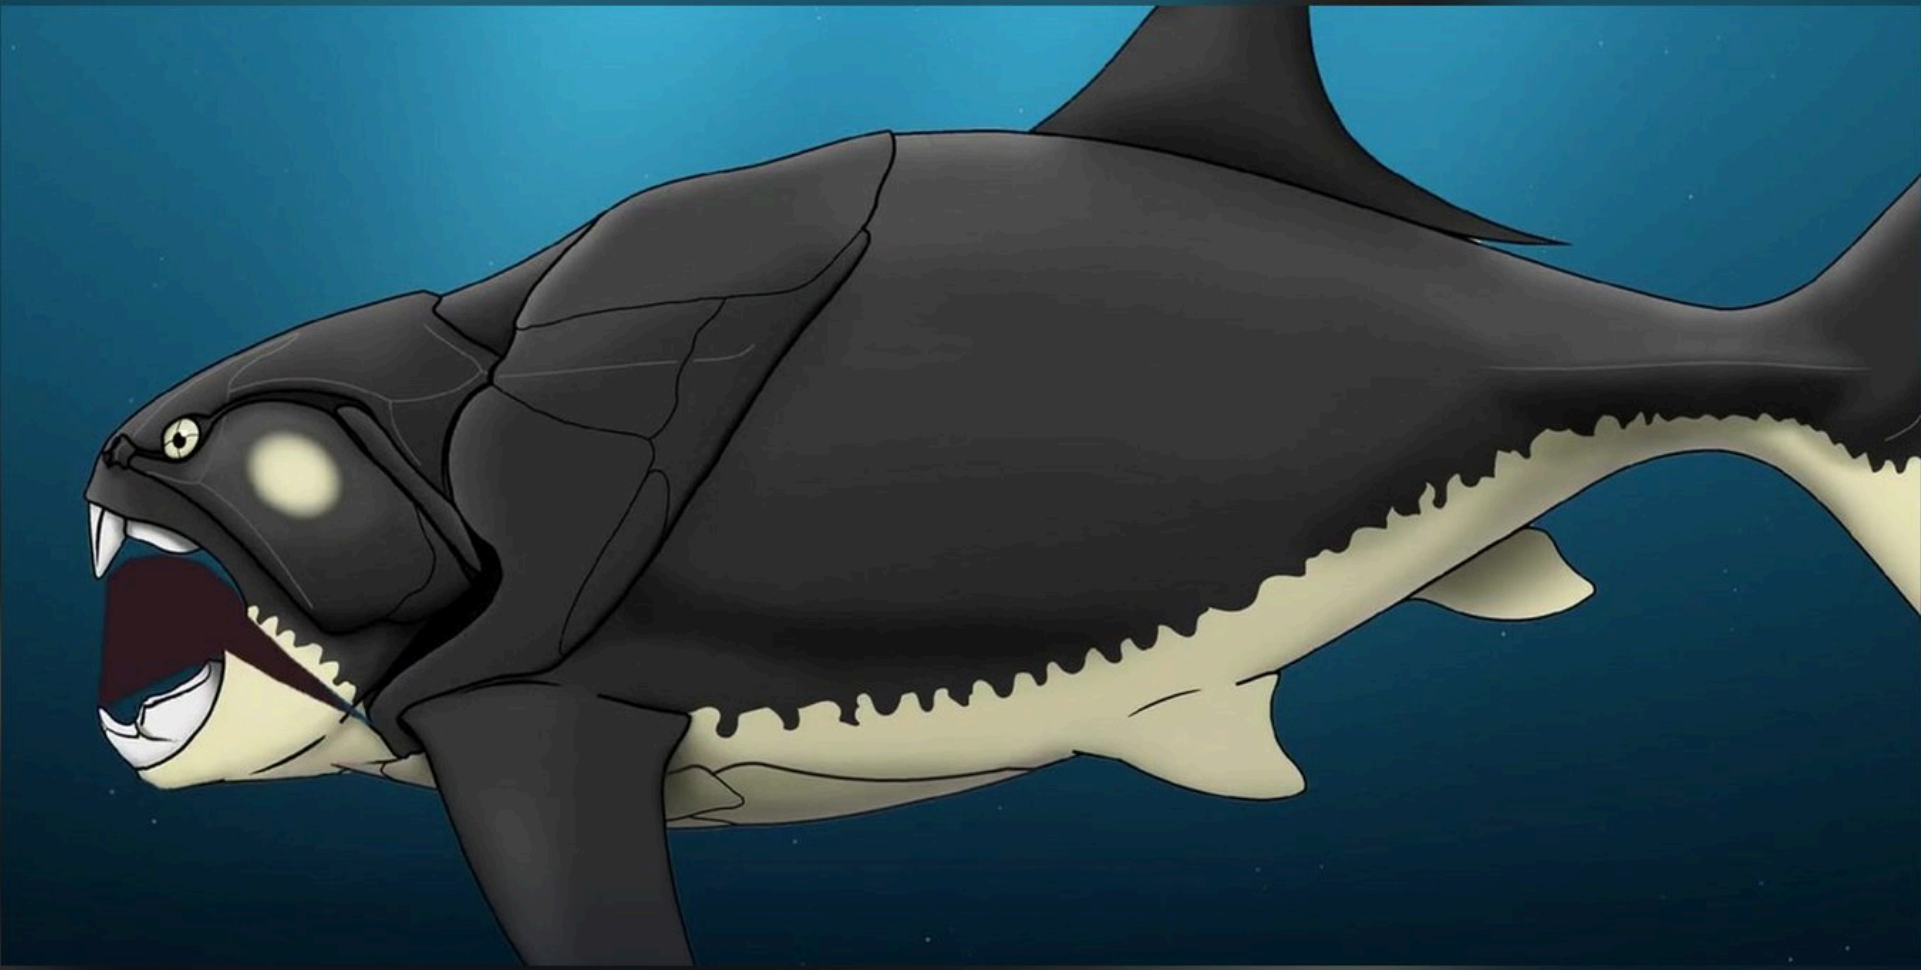

Let's say the words.

Ocean.

Dunkleosteus.

Fish.

Big.

Head.

Armor.

Jaws.

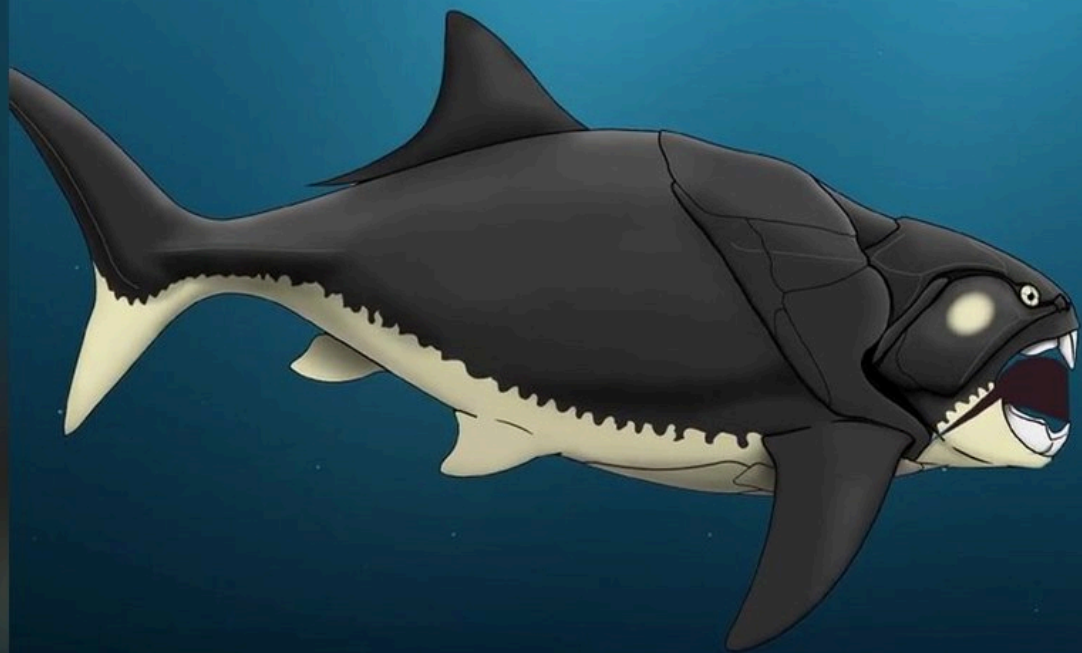

Sharp.

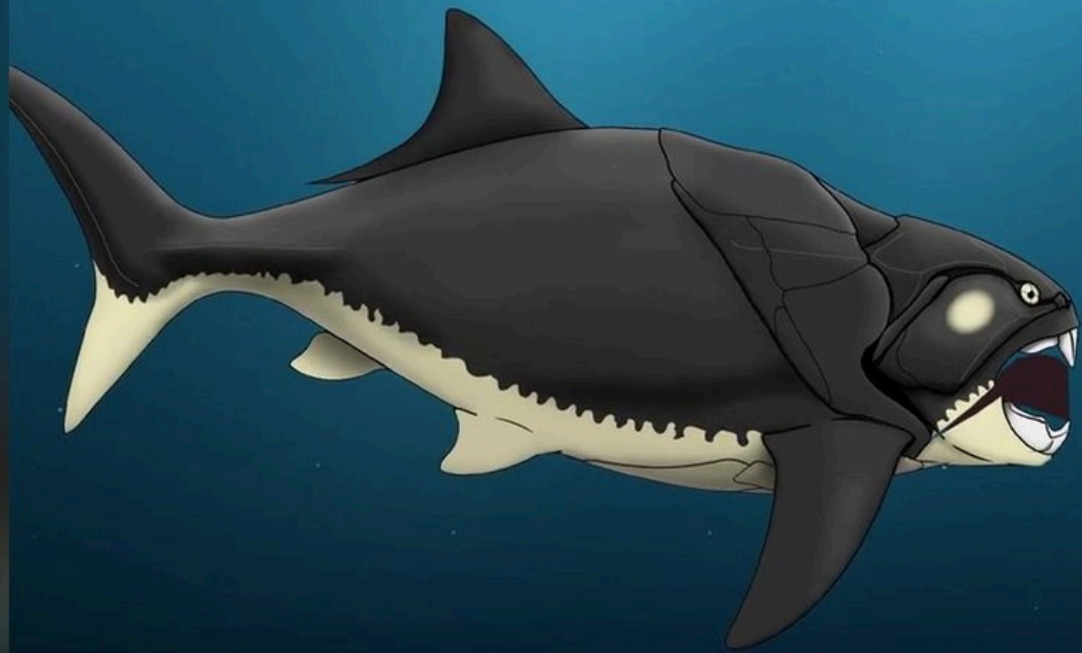

Fast.

Bite.

Hunt.

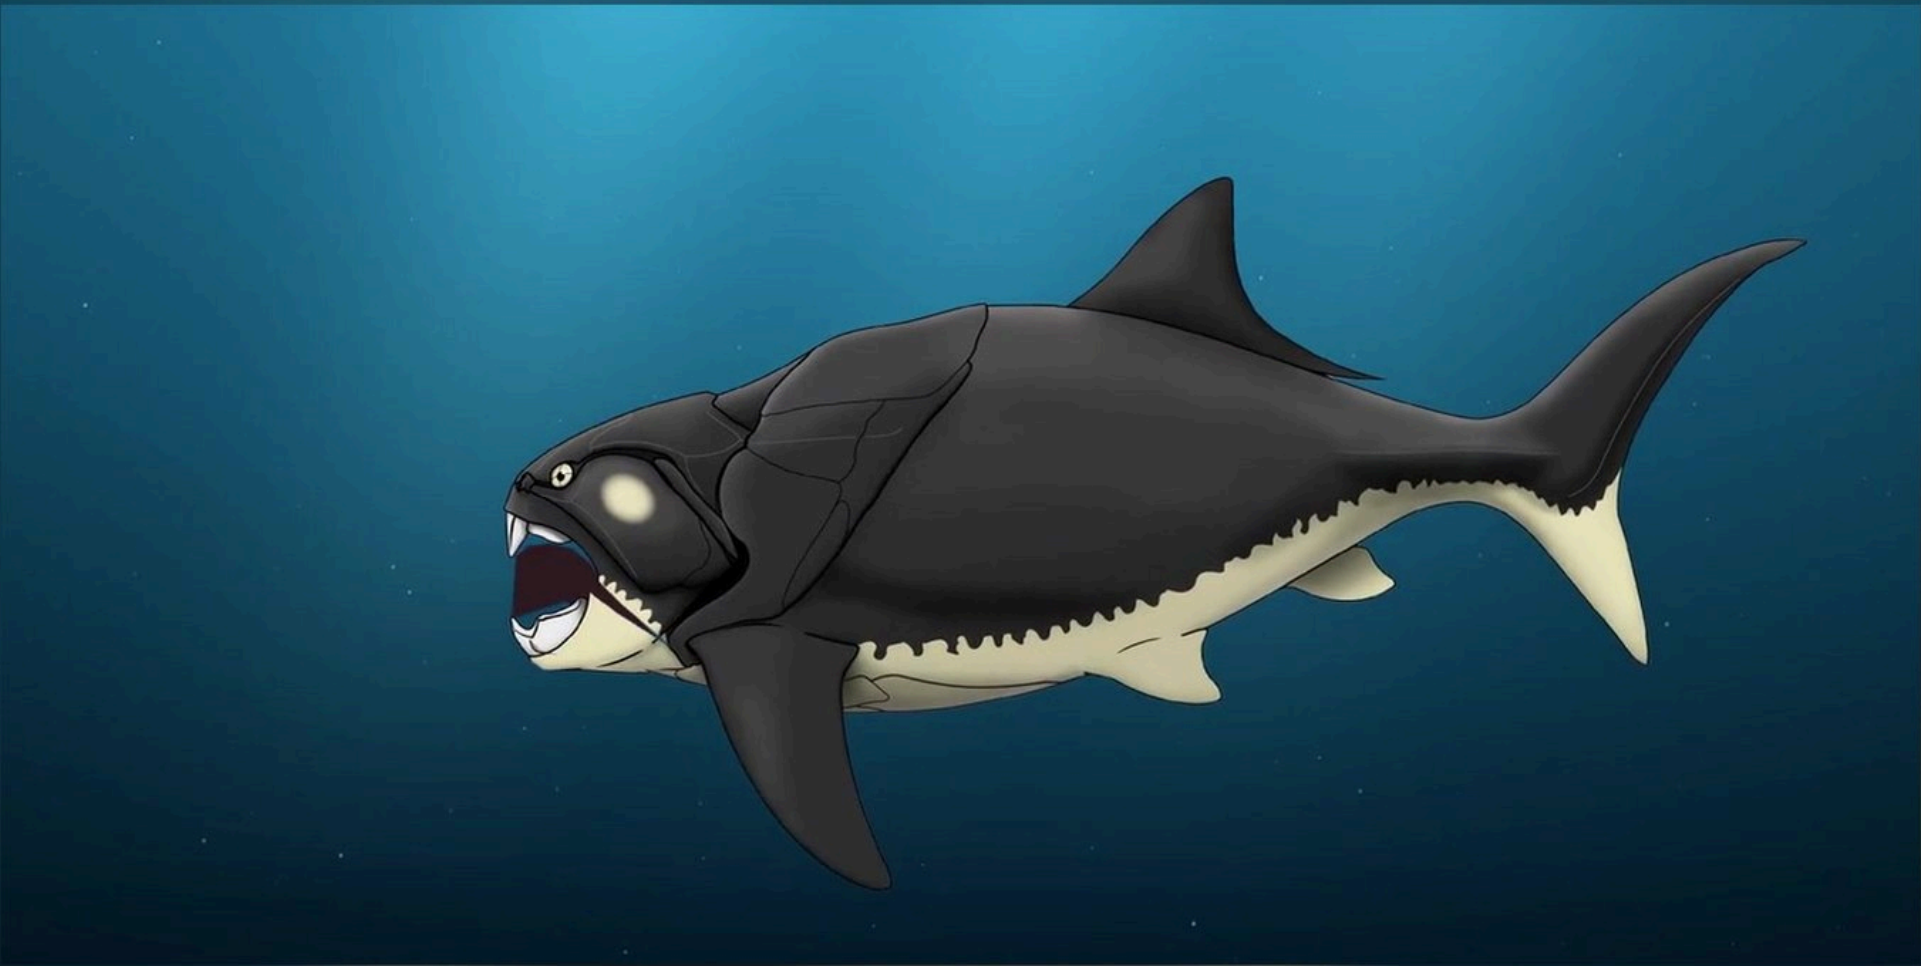

Shark.

Fossil.

Great job!

Bye bye, Dunk!

Oh no!

It is opening its mouth.

It is just saying hello.

See you next time!
